Automated Lubrication Systems for the Wastewater Industry

- Improves bearing life** by applying small measured amounts of lubricant more often.
- Increases productivity** by lubricating while machinery is running – no downtime.
- Improves safety** by eliminating the need to climb around equipment for manual lubrication.
- Reduces maintenance costs** due to fewer breakdowns caused by bearing failures.
- Eliminates labor** for manual lubrication.
- Reduces lubricant cost** by precisely applying measured amount of lubricant.
- Eliminates contamination** due to over-lubrication.
- Reduces energy costs** due to improved lubrication and less friction.

Applications for Lincoln Auto Lube Systems:

- Belt Presses
- Grit Pumps
- Sludge Dryers
- Sludge Thickeners
- Bar Screens
- Belt Conveyors
- Blowers
- Centrifuges
- Screw Conveyors
- Electric Motors
- Return Activation
- Sludge Pumps
- **and more!**

In a study conducted by the bearing manufacturer SKF, over 50% of bearing failures are the result of improper lubrication.
