

Solid Rocket Fuel Extrusion System

- Custom operator console, constructed of modular framing
- Custom hydraulic system provided proportional pressure and flow control, as well as flow isolation
- Wonderware-based man/machine interface, which included an ACCESS database
- A gauge measurement system allows micrometer and caliper measurements to be stored in a common ACCESS database by part number
- A dedicated vision system provides diameter measurements, used to control the diameter of the extrusion in real time
- Multiple systems produced
