Featured Products for Wastewater Applications

HYDAC

AutoFilt® RF3

Automatic Self-Cleaning Filter

- Up to 150 psi
- Up to 31,000 GPM

HYDAC back-flush filters are designed for continuous and maintenance-free filtration for all major manufacturing and processing industries.

Removes solid contamination from low-viscosity fluids such as water and machine tool coolants.

Features & benefits:

Rugged construction and self-cleaning feature provide increased machinery reliability, resulting in reduced operating, labor and maintenance costs

- Fully-automatic operation
- Continuous filtration even during back-flushing
- Conical filter elements for optimum filtration
- Pulse-aided back-flushing cleaning
- Individually adjustable control parameters
- ANSI mounting port flanges from 2" to 36"

LINCOLN

Quicklub® P203

Automated Lubrication System

Lincoln's complete lubrication systems include all necessary monitoring and control functions. All components, including an internal pressure relief valve, are part of the complete package. Multiple lubrication points can be reliably supplied directly from the pump.

Wastewater applications:

- Belt presses
- Bar screens
- Blowers
- Grit pumps
- Centrifuges
- Return activation sludge pumps
- Electric motors
- Sludge dryers
- Sludge thickeners
- Screw conveyors, and more!

Airline Hydraulics: An ISO 9001:2008 Certified Fluid Power Distributor

Whether you require an off-the-shelf component, a fully-engineered system, or something in between, look to Airline to quickly and cost-effectively supply you with your solution. And count on our Service & Repair Team to recommend and implement the best options to ensure the longest and most reliable service life for your system or component.

Call Airline toll-free at **800-999-SERV (7378)** or visit us online at www.airlinehyd.com.
