The Future of Climate Control

Rittal the Authority for Comprehensive Climate Control
Many companies talk about the future, Rittal is shaping it. We have chosen a forward-thinking approach for climate control development and environmental protection is the focus of our research.

Rittal has been the trendsetter in the climate control market for many years.

Since 1992 Pro Ozone has become the global term for environmentally friendly cooling technology. At one time the only environmental issue was to replace the coolants R22 and R12, that were destroying the ozone layer. Now we are dealing with the greenhouse effect, a result of the ozone layer destruction. Rittal is searching for ways to replace the coolant R134a and reduce emissions.

During the operation of an air conditioner only 3% of the CO₂-creation in the environment is the result of the coolant, the other 97% is the result of the electric power consumption. All Rittal climate control products have been consistently designed for energy-efficiency.

Our newest feature, Rittal Liquid Cooling offers an innovative approach to enclosure cooling with effective and progressive climate control options.

History of successes for Rittal innovations

1983 Beginning of Rittal’s enclosure climate control production.
The focus of our development and design at the time:
Reducing strain on the environment with energy efficient and highly effective equipment.

1988 First enclosure air conditioner equipped with microcontroller.

1992 First air conditioner without the coolant R22/R12, Pro Ozone.

1994 First Design-air conditioner line, with updated microcontroller.

2002 Rittal TopTherm, the new generation of air conditioners and the beginning of Rittal’s liquid cooling concept.
Rittal’s CMC remote monitoring system provides surveillance of air conditioners and chiller systems via the Internet.

Experience – Research – Development

Constant communication with our global customers, combined with Rittal’s vast experience with climate control research and development, create many options for your specific application.

Rittal develops customized solutions, with the aid of its own accredited laboratories, computer supported flow models (CFD) and infrared-thermography.
Better selection, better quality, better value

Rittal has expanded the successful TopTherm program with the addition of several new air conditioners and heat exchangers. Our system wide cross-platform concept makes a variety of cost effective solutions possible. It facilitates special solutions for all sorts of individual needs and applications.

New liquid cooling concepts

New performance standards for CPUs, network components, hard drives and other hardware have been set. Liquid can absorb and dissipate a thousand times more heat in comparison to air by volume, therefore Rittal has established new dimensions in its development of cooling technology.

Rittal looks to the future.
Rittal’s climate control offers perfect solutions for forward-thinking and comprehensive process control. Perfectly coordinated **enclosure systems, climate control technology and remote monitoring systems** provide state-of-the-art security and availability for your production facility. Rittal is able to develop customized climate control solutions for virtually any application.

Identical installation cutouts for a variety of air conditioners, heat exchangers and fans, make the installation of climate control simple and **adaptable to your individual cooling needs**.

Rittal climate control – We insist on top quality, great value, environmentally friendly and highly effective equipment.

**Rittal TopTherm air conditioners, in a performance class by itself.**

**Rittal TopTherm** air conditioners are built to the highest standards. Functional design, high degree of effectiveness, targeted cold air routing, and centralized monitoring make **TopTherm** air conditioners top performers.

- Technology: Ideal combination of comfort, safety and flexibility.
- Cooling performance: Generated and distributed effectively.
- Design: Form follows function, aesthetically pleasing and an eye-catching design.
- Service: Layout, project planning, and thermal analysis.

**Chiller systems multitask in cooling technology**

The efficiency of chillers is ideal for applications where high cooling requirements exist. Chillers apply a comprehensive approach to process, machine and fluid cooling. Chillers are able to dissipate large heat loads with air/water heat exchangers and cooling elements from enclosures and components.

- All inclusive, service: Project planning, prototypes, quoting, installation and start-up and service agreement.
- Cost advantage: Globally available off-the-shelf components make economizing easy.
Air/air heat exchangers use the cooler ambient air to effectively dissipate heat from the enclosure by using hermetically sealed air circuits (using a counter current, or cross-flow concept). Ambient air and dust are unable to ingress the enclosure.

Air/water heat exchangers cool the enclosure interior by integration into an existing cooling water cycle or connection to a chiller. This makes efficient dissipation of high heat loads under the most extreme conditions possible.

Filter fans with a very low profile design, low noise and high output. Prerequisite: cool, relatively clean ambient air.

19” Climate control: Rack-mounted air conditioners, rack-mounted fans and blowers. Cooling is most effective when installed directly below the electronic equipment.

Heaters prevent the formation of condensation. This is especially valuable for outside locations or unheated rooms.

Climate control accessories make achieving the perfect climate solution even easier.
Climate Control

Overview

Air Conditioners
Features ............................................................................................................... 22
Climate Controlled Enclosures
Enclosures, single door .................................................................................... 24
Enclosures, twin door ....................................................................................... 25

Climate Control Overview

Rittal's climate control creates the desired ambient conditions for virtually any application, including sensitive electronics. A wide range of air conditioners, chillers, heat exchangers, filter fans and enclosure heaters protect against adverse physical and thermal conditions. Rittal also offers a wide range of system accessories.

Enhanced operational reliability and a longer service life for electronics
- Climate controlled enclosure systems
- Air conditioners
- Chillers
- Heat exchangers
- Filter fan units
- Roof-mounted fans
- Rack-mounted climate control
- Enclosure heaters
- Cooling

Detailed information can be found on pages 22 – 118 or on our website: www.rittal-corp.com

Rittal Climate Control offers comprehensive process protection for virtually any application. This includes the cooling of sensitive electronics in enclosures and cases for industrial process control, and server and network technology, regardless of ambient conditions. But Rittal's climate control systems are not isolated solutions, with Rittal, everything is interconnected. Perfectly linked and controlled cooling technology combined with eco-friendly, energy-efficient equipment, create the perfect environment for your equipment.

Features

**Rittal Climate Control**

- **Air Conditioners**

Rittal Climate Control offers comprehensive process protection for virtually any application. This includes the cooling of sensitive electronics in enclosures and cases for industrial process control, and server and network technology, regardless of ambient conditions. But Rittal’s climate control systems are not isolated solutions, with Rittal, everything is interconnected. Perfectly linked and controlled cooling technology combined with eco-friendly, energy-efficient equipment, create the perfect environment for your equipment.

**Selection criteria**

- **Intelligent control**
  - Rittal offers basic and comfort control versions for operational reliability. Both versions offer a comprehensive range of functions. Essential control electronics are well protected and cooled in the inner circuit.
  - Both versions have the following properties:
    - Three voltage options: 115 V, 230 V, 400/460 V 3–
    - Integrated start-up delay and door limit switch function
    - Icing protection function
    - Monitoring of all motors
    - Phase monitoring for three-phase units

- **Integrated cooling technology**
  - The combination of enclosure and cooling components provides excellent cooling, cost savings and reduced assembly time.

- **Roof-mounted air conditioners**
  - Requirement oriented routing of cooling air in the internal circuit is possible with up to four cold air outlet openings and the optional use of ducts. In the external circuit, the heated air is expelled to the rear, left, right, and optionally upwards. This allows enclosures to be bayed together or to be installed close to the wall.

- **Wall-mounted air conditioners**
  - Depending on the space and design requirements, internal mounting, partial internal mounting and external mounting are all possible. Effective cold air dissipation throughout the enclosure is achieved by large distances between the air intake and outlet openings.

**Intelligent control**

- Rittal offers basic and comfort control versions for operational reliability. Both versions offer a comprehensive range of functions. Essential control electronics are well protected and cooled in the inner circuit.
- Both versions have the following properties:
  - Three voltage options: 115 V, 230 V, 400/460 V 3–
  - Integrated start-up delay and door limit switch function
  - Icing protection function
  - Monitoring of all motors
  - Phase monitoring for three-phase units

**Basic controller:**
- Visualization of the operating status by a LED display
- Switching hysteresis: 5 K
- Floating fault signal contact in case of over temperature
- Set-point adjustable from the outside by a potentiometer (setting range 20° – 55°C (68° – 131°F))

**Comfort controller:**
- Switching hysteresis: 2 – 10 K preset to 5 K
- System alarm, individually configurable for 2 floating fault signal contacts
- Visualization of the current enclosure internal temperature and all system messages on the display
- Storage of all system states in the log file
- Optional extension card for integration into superordinate remote monitoring systems (CMC)

800-999-7378

800-999-7378
**Air Conditioners**

**Features**

### Integrated cooling technology

- **Infinite possibilities**
  - The TS8 modular enclosure system platform offers full compatibility in terms of baying techniques, lock systems and interior installation.

- **Quick exchange of the door and sidewall**
  - The symmetrical design allows the climate control door to be easily changed.

- **Exchangeable in a flash**
  - With all integrated cooling technology models, the cooling module can be quickly exchanged in just a few steps.

### Roof-mounted air conditioners

- **Flexible performance**
  - Only 3 mounting cutouts for 6 different output categories in 28 design versions.

- **Targeted air routing in the enclosure**
  - The internal air circulation is targeted and effective. The heated air is extracted centrally. Air exhaust occurs in the four corners, based on your specific requirements.

- **Flexible condensate management**
  - All roof-mounted air conditioners with comfort controller are equipped with a condensate warning feature. A condensate pump and condensate evaporator may be integrated.

### Wall-mounted air conditioners

- **Wall-mounted air conditioners – Practical and stylish**
  - The mounting cutout is selected depending on the mounting type: external, internal or partial internal mount. This makes optimum use of the available space.

- **Effective air routing inside the enclosure**
  - The large distance between the air intake and outlet in the internal circuit makes wall-mounted air conditioners particularly effective. This ensures optimum air dissipation inside the enclosure, and air short-circuits are avoided.

- **Developed for easy servicing, inside and out**
  - The assemblies, their arrangement and the divided internal case construction make all types of maintenance and servicing work much easier.

### Benefits:

- Useful cooling capacity from 225 to 4000 W (768 to 13,661 BTU)
- Extensive control and monitoring features, even with the basic version
- Three-phase air conditioners support multiple voltages as standard
- Uniform, output-related, cross-system mounting cutouts, to match TopTherm air/air heat exchangers
- Targeted, individual air routing
- No assembly work and low investment costs, due to the complete solution consisting of an enclosure and integrated air conditioner
- May be integrated directly into TS8 bayed enclosure suites

### Important:

- Use a base/plinth of at least 100 mm (3.9˝) high to ensure unhindered air entry
- Avoid overloading the roof-plate by using stays (see TS8 system accessories)
- Air intake and outlet openings in the internal and external circuit must not be blocked.

---

1) Only for integrated cooling technology.
Climate Controlled Enclosures

Enclosures, single-door, useful cooling capacity 1250/1510 W (4270/5150 BTU)

Configuration:
Enclosure frame with rear-wall, roof and climate control door, including TS8 hinges, door opening angle approximately 110°, painted, including pre-assembled cooling module, right door hinge, may be changed to opposite side, 4 eyebolts, pre-fitted, mounting panel, three-part gland panels, depth stay as shipping brace.

Also required:
For correct functioning of the external circuit:
Base/plinth, 100 or 200 mm (3.9 or 7.9") high.

 Optionally available:
Microcontroller control with:
● Digital temperature indicator,
● Floating contact for collective fault signal,
● Connection for door operated switch for start-up delay,
● Automatic condensate evaporation.

Climate Controlled Enclosures

Enclosures, two-door, useful cooling capacity 2000/2550 W (6865/8708 BTU)

Configuration:
Enclosure frame with rear-wall, roof and climate control door, including TS8 hinges, door opening angle approximately 110°, lockable door with standard hinges, painted, including pre-assembled cooling module, 4 eyebolts, pre-fitted, mounting panel, three-part gland panels, depth stays as shipping braces.

Also required:
For correct functioning of the external circuit:
Base/plinth, 100 or 200 mm (3.9 or 7.9") high.

Optionally available:
Microcontroller control with:
● Digital temperature indicator,
● Floating contact for collective fault signal,
● Connection for door operated switch for start-up delay,
● Automatic condensate evaporation.

Climate Control Doors

For 600 mm (23.6”) wide TS8 modular enclosures, useful cooling capacity 1250/1680 W (4269/5738 BTU)

Also required:
Base/plinth, 100 or 200 mm (3.9 or 7.9”) high.

Optionally available:
Automatic condensate evaporation.

Configuration:
Climate control door unit with pre-fitted cooling module, including TS8 hinges, door opening angle approximately 110°.

Note:
Climate control doors for two-door TS8 modular enclosures see pages 29/30.

Configuration:
Climate control door unit with pre-fitted cooling module, including TS8 hinges, door opening angle approximately 110°.

For 1200 mm (47.2”) wide TS8 modular enclosure, useful cooling capacity 1250/1680 W (4269/5738 BTU)

Configuration:
Climate control door unit with pre-fitted cooling module, including TS8 hinges, door opening angle approximately 110°.

Note:
With the device positioned on the right, one pack consists of a climate control door for installing on the right side of the enclosure, and a lockable door for the left.

With the device positioned on the left, one pack consists of a climate control door for installing on the left side of the enclosure. The existing lockable door on the right may be used.

Climate control doors for single-door TS8 modular enclosures, see pages 26 – 30.

Also required:
Base/plinth, 100 or 200 mm (3.9 or 7.9”) high.

Optionally available:
Automatic condensate evaporation.

Certifications, see page 8.
Detailed drawing, see page 12.

With the device positioned on the right, one pack consists of a climate control door for installing in the right side of the enclosure, and a lockable door for the left.

Also required:
Base/plinth, 100 or 200 mm (3.9 or 7.9") high.

Optionally available:
Automatic condensate evaporation.
Climate Control Sidewalls

For 600 mm (23.6") deep TS8 modular enclosures, useful cooling capacity 1200/1450 W (4098/4952 BTU)

Configuration:
Climate control sidewall with pre-fitted cooling module.

Also required:
Base/plinth, 100 or 200 mm (3.9 or 7.9") high.

Optionally available:
Microcontroller control with:
- Digital temperature indicator,
- Floating contact for collective fault signal,
- Connection for door operated switch for start-up delay,
- Automatic condensate evaporation.

Certifications, see page 8.

Roof-Mounted Air Conditioners

Useful cooling capacity 510/810 W (1742/2766 BTU)

Configuration:
Fully wired ready for connection, including drilling template and assembly parts.

Note:
Air conditioners with comfort controller may be integrated into a superordinate remote monitoring system with an optional interface board SK 3124.200 (RS 232, RS 485, RS 422 and PLC interface).

Accessories:
Roof plate for TS8 modular enclosure with mounting cutout, see page 107.

Optionally available:
With automatic condensate evaporation.

To order air conditioners with integrated condensate evaporators, add .XX1 to the part number, ie. XXXX.XX1.

Certifications, see pages 9/10.
Detailed drawing, see page 121.

Useful cooling capacity 1080 W (3688 BTU)

Configuration:
Fully wired ready for connection, including drilling template and assembly parts.

Note:
Integration of the air conditioners with comfort controller, into a superordinate remote monitoring system, can be achieved with an optional interface board SK 3124.200 (RS 232, RS 485, RS 422 and PLC interface).

Special voltages available on request. Technical modifications reserved.
Roof-Mounted Air Conditioners

Useful cooling capacity 1200 W (4098 BTU)

- Designed for office applications. Low noise level (considerably quieter than air conditioners for industrial applications).
- Configuration: Fully wired ready for connection, including automatic condensate evaporation, drilling template and assembly parts.
- Note: Integration of the air conditioners with comfort controller, into a superordinate remote monitoring system, can be achieved with an optional interface board SK 3124.200 (RS 232, RS 485, RS 422 and PLC interface).

### Accessories:
- Roof plate for TS8 modular enclosures with mounting cutout, see page 107.
- Certifications, see page 9.
- Detailed drawing, see page 121.

To order air conditioners with integrated condensate evaporators, add .XX1 to the part number, i.e. XXXX.XX1.
The new VIP small air conditioners were developed especially for cooling the VIP 6000 command panel. In addition, VIP small air conditioners offer a space-saving, economical solution for the climate control of small enclosures where low heat loads are generated by the system.

**Configuration:**
Fully wired, ready for connection and pre-mounted on an aluminum rear-wall to fit VIP 6000 operating housing 7 U.

**Property rights:**
German patent no. 198 17 917

**Certifications,** see page 10.

mini air conditioners in horizontal format, ideal for cooling small equipment and operating housings with optimum space utilization.
**Wall-Mounted Air Conditioners**

**Useful cooling capacity** 320/610 W (1093/2080 BTU)

**Configuration:**
Fully wired ready for connection, including drilling template and assembly parts.

**Note:**
Integration of the air conditioners with comfort controller, into a superordinate remote monitoring system, can be achieved with an optional interface board SK 3124.200 (RS 232, RS 485, RS 422 and PLC interface).

**Partial internal mounting possible with 3303.XXX only.**

**Certifications,**
see page 10.

**Detailed drawing,**
see page 122.

Useful cooling capacity 4400 W (15,027 BTU)

**Configuration:**
- Fully wired ready for connection, including drilling template, eyebolt and assembly parts.

**Note:**
- Integration of the air conditioners with comfort controller, into a superordinate remote monitoring system, can be achieved with an optional interface board SK 3124.200 (RS 232, RS 485, RS 422 and PLC interface).

**Part No. SK with basic controller, RAL 7035 (light gray)**: 3332.140
- Dimensions in mm (inches): H 1580 (62.2), W 500 (19.7), D 340 (13.4)
- Useful cooling capacity QK to DIN 3168 in W (BTU): L 35 4000/4400 (13,661/15,027)

**Part No. SK with comfort controller, RAL 7035 (light gray)**: 3332.540
- Useful cooling capacity QK to DIN 3168 in W (BTU): L 35 3070/3570 (10,485/12,192)

**Part No. SK with basic controller, stainless steel**: 3332.240

**Part No. SK with comfort controller, stainless steel**: 3332.640

**Rated current maximum**: 3.8 A/3.9 A
**Starting current**: 9.3 A/11.0 A
**Pre-fuse T**: Motor circuit breaker 10.0 A/10.0 A

**Power consumption Pw to DIN 3168**: L 35 L 35 1710 W/2110 W, L 35 L 50 1980 W/2450 W
**Cooling coefficient ε = QK/Pw**: L 35 L 35 2.3

**Refrigerant R134a, 3000 g (105.8 oz)**
**Maximum allowable operating pressure**: 28 bar (406 psi)
**Temperature and setting range**: +20°C to +55°C (68°F to 131°F)

**Ratings to EN 60 529/10.91**
- **External circuit**: IP 34 (NEMA 2)
- **Internal circuit**: IP 54 (NEMA 12)

**Duty cycle**: 100 %
**Type of connection**: Plug-in terminal strip
**Weight in kg (lb)**: 91 (200.6)
**Air displacement of fans**: External circuit 2000 m³/h (1177 cfm), Internal circuit 1500 m³/h (883 cfm)

**Temperature control**: Basic or comfort controller (factory setting +35°C (95°F))

**Increased value, lower costs**

---

RiNano anti-fingerprint and anti-microbial – the refinement of stainless steel products

These two finishes may be used individually or together.

**Anti-fingerprint** will make finger prints less visible, they can easily be wiped off with a dry cloth. The ultra-fine nano composite material will not visibly change the appearance of the surface.

**Anti-microbial**, with a special silver finish, prevents the development of microbes (viruses, bacteria, fungi). Simple cleaning washes them off.

Ciba tested.

Please request additional information at rinano@rittal-corp.com.

---

TopTherm & RiNano an innovative finish for long lasting cooling performance

Layers of dust on the outer air circuit surfaces of air conditioners can diminish effectiveness by 30 to 50 % due to the insulating effect. A revolutionary RiNano-finish can prevent this because of its water, dirt and oil repelling properties; it will help provide long lasting, consistent cooling performance. Service and maintenance can be scheduled less frequently and cleaning will be much easier.

---

Anti-graffiti – the cleaning of CS Outdoor enclosures will be easy with our RiNano finish.

Not all painted works can be considered art. A RiNano-finish enhancement will make the removal of graffiti effortless. Spray-paint can be removed with a power-washer as part of regular cleaning. The finish repels other stains and contaminants as well.

We are confident that you will find this finish option very useful.

Chiller Systems

Features

Chiller systems ensure centralized, efficient cooling and provision of the cooling medium (generally water). For example, all cooling tasks on a system or machine can be solved by a single pipeline system. Spatial separation between cooling production and process cooling can be achieved with chiller systems.

Application diversity of centralized cooling technology

Enclosure cooling
In conjunction with air/water heat exchangers, optimum dissipation of high heat loads is guaranteed, even under extreme ambient temperatures and air pollution.

Cooling of liquid media
Direct and indirect cooling of liquids are the prerequisite for ensuring essential machine precision and speed.

Process cooling
High-quality material processing, such as laser cutting, requires high levels of temperature precision with simultaneous cooling of the peripheral technology.

Installation conditions

Unity with enclosures
For example, chiller systems may be attached directly to a bayed enclosure suite to provide effective, centralized cooling of all cases and enclosures on a machine or plant floor.

Spatially separated
High heat loads can even be dissipated in confined and awkward spaces, due to the spatial separation of the chiller system from the enclosure and machine. In all cases, as well as enclosure cooling, cooling water may also be produced for process and machine cooling or for cooling liquid media.

Benefits:
- A single system for enclosure cooling, process and machine cooling, and the cooling of liquid media.
- Integration into bayed enclosure suites
- Individual project planning
- Commissioning and servicing

Important:
- Cooling capacity calculated at an ambient temperature of 32°C (90°F) and an inlet temperature of 10°C (50°F) and 18°C (64°F) (water)/20°C (68°F) (oil)

Unity with enclosures

Spatially separated

Benefits:

Important:

Chiller Systems

Features

Project planning examples

Example 1
Production line
High-quality material processing requires a high degree of temperature precision with simultaneous cooling of the peripheral technology. The cost-effective cooling of various equipment in the production line is performed centrally by the chiller system in an industrial enclosure. It supplies the machine, process cooling and control enclosure with the required cooling water by an air/water heat exchanger.

Example 2
Test laboratory
Every single product is subjected to in-depth functional and quality testing at the in-house test laboratory. To ensure that the test process runs smoothly, the control enclosures are cooled by an air/water heat exchanger, and the three test benches are supplied with the required cooling water per the test requirements. These diverse cooling tasks are performed by the chiller system integrated into the TS8 modular enclosure system. Visually, they form a single unit with the TS8 control enclosure.

Example 3
Control room
In conjunction with air/water heat exchangers, the server and network enclosures installed in the production control room are cooled by a mini chiller system. The mini chiller system is installed outside of the production control room to avoid contaminating the room air, and to facilitate optimum dissipation of the heat loss generated by the chiller system.

Example 4
Tool production
The heat loss generated during tool machining, (for example by water-cooled motor spindles with high-frequency drives), must be dissipated efficiently. In this case, the task is performed by a wall-mounted Mini chiller system which at the same time ensures cooling of the control unit, also integrated into the machine.
Chiller Systems

Mini, cooling capacity 1070/1660 W (3654/5669 BTU)

Technical design:
- Compact and modular layout of the cooling components on a base plate which functions as a collecting tray
- Medium-conveying pumps
- Precise temperature control, based on microprocessor technology
- Collective fault signal with floating contact
- Application-specific equipment available on request.
- Pressure-sealed system (.600) or open system with tank (.610)

Configuration:
Chiller system wired and plumbed ready for connection, with multilingual documentation including functional diagram and wiring plans.

Note:
The illustration shows units with customer-specific options.

800-999-7378
Mini, cooling capacity 3400/5400 W (11,612/18,442 BTU)

Technical design:
- Compact, modular configuration of the cooling components with integrated water tank. Operator display may be optionally mounted on the front or rear.
- Integrated tank level display
- Medium-conveying pumps
- Precise temperature control, based on microprocessor technology
- Collective fault signal with floating contact
- Application-specific equipment available on request

Configuration:
- Chiller system wired and plumbed ready for connection, with multilingual documentation including functional diagram and wiring plans.

Note:
The illustration shows units with customer-specific options.

Layout diagram, see page 128.
Characteristic curves of pump, see page 128.
Options, see page 126.

Chiller Systems

Freestanding enclosure, cooling capacity 2100 to 7700 W (7172/26,297 BTU)

Technical design:
- Robust industrial standard in 5 enclosure sizes
- Identical basic enclosure for oil and water chiller systems
- Extra space for the integration of special equipment
- Variable air routing is possible via the left or right sidewall
- Floating contact for collective fault signal
- Level monitor
- Multi-coil vaporizer in the tank

Configuration:
- Chiller system wired and plumbed ready for connection, with multilingual documentation including functional diagram and wiring plans.

Note:
The illustration shows units with customer-specific options.

Accessories:
- Metal filter mats, castors, eyebolts and safety modules available on request.

Certifications,

1) SK 3337.720 and SK 3337.750 +15°C to +40°C (59°F to +104°F). Delivery times available on request.
Special voltages, other refrigerants, and technical modifications available on request.
Chiller Systems

In TS8 modular enclosure system, cooling capacity 6000/7500 W (20,491/25,614 BTU)

Technical design:
- Compact structure with control components in the front and air intake via the rear
- Suitable for bayed siting
- Special fittings and options available on request
- Float-actuated switch as protection against running dry
- Floating collective fault signal
- Equipped with Grundfos pumps and Siemens components
- Service accessibility from all sides

Configuration:
Chiller system wired and plumbed ready for connection, with multilingual documentation including functional diagram and wiring plans.

Note:
The illustration shows units with customer-specific options.

Part No. SK 3335.060 3335.075
Voltage V, Hz 400, 3~, 50

Dimensions in mm (inches) 2000 (78.7) 600 (23.6) 600 (23.6)

Chiller Systems

In TS8 modular enclosure system, cooling capacity 10000 to 25000 W (34,152/85,379 BTU)

Technical design:
- Compact structure with control components in the front and air intake via the rear
- Suitable for bayed siting
- Special fittings and options available on request
- Float-actuated switch as protection against running dry
- Floating collective fault signal
- Magnetic valve in the cooling circuit
- Equipped with Grundfos pumps and Siemens components
- Service accessibility from all sides

Configuration:
Chiller system wired and plumbed ready for connection, with multilingual documentation including functional diagram and wiring plans.

Note:
The illustration shows units with customer-specific options.

Heat Exchangers

Features of air/air heat exchangers

Rittal’s air/air heat exchangers are perfect for environments where the ambient air temperature is at or below the desired interior temperature of the enclosure. Two separate air circuits prevent dust and pollutants present in the ambient air to ingress the enclosure interior.

The air of the enclosure interior may be cooled to below the level of the external temperature by using air/water heat exchangers with a central chiller system. Dust is unable to penetrate the enclosure. The waste heat from the enclosure does not raise the temperature of the ambient air, provided the cold water supply system is spatially separated.

Platform concept/installation

Identical installation cutouts for various output categories.

Easily retro-fitted

Due to the low weight, simple assembly cutouts and problem-free attachment of the heat exchangers, a cabinet or enclosure is easily retro-fitted.

Servicing/security

Simple maintenance

The heat exchanger module removes easily for cleaning.

The cleverly designed structure enables fast, economical maintenance.

Benefits:

● Specific thermal output from 17.5 W/C to 90 W/C
● External and internal circuit may be controlled separately
● Mounting cutouts and enclosure dimensions identical to TopTherm wall-mounted air conditioners
● Suitable for external and internal mounting
● Top design identical to TopTherm wall-mounted air conditioners

Important:

● The temperature difference between the room temperature and enclosure internal temperature will have a decisive effect on the heat loss that may be dissipated.

For calculation bases, refer to our website: www.rittal-corp.com

Heat Exchangers

Features of air/water heat exchangers

Even suitable for use in extreme conditions

Overflow valves and bypass controls should be integrated into the chiller system and the customer's own pipeline system respectively.

1. Chiller system
2. Air/water heat exchanger, roof-mounted
3. Air/water heat exchanger, wall-mounted
4. Additional cooling water circuit for machine cooling

Example: Parallel connection of air/water heat exchangers with cold water supplied by a chiller system.

Ideal for any location

If direct dissipation of heat loss to the ambient air is not desired or ineffective due to confined spaces, the air/water heat exchangers will provide the ideal solution. By spatially separating the exchanger from the chiller system, highly individual and effective solutions for cooling individual enclosures or bayed enclosure suites can be achieved.

Versions

Roof-mount

Especially for bayed enclosures, where wall-mounted devices would obstruct the door.

Wall-mount

For mounting on the wall or any sufficiently large vertical surface.

Sidewall

Economical use: Air/water heat exchanger as a sidewall in the TS8 modular enclosure system.

Controller

Basic controller:
- Visualisation of the operating status by a LED display
- Switching hysteresis: 5 K
- Floating fault signal contact in case of over temperature
- Setpoint adjustable from the outside by a potentiometer (setting range 20° – 55°C (68° – 131°F))

Comfort controller
- Switching hysteresis: 2 – 10 K preset to 5 K
- System alarm, individually configurable for 2 floating fault signal contacts
- Visualisation of the current enclosure internal temperature and all system messages on the display
- Storage of all system states in the log file
- Optional extension card for integration into superordinate remote monitoring systems such as CMC

Flexible water logistics and condensate management

Any condensate is discharged by one of the two tube connectors (1/2˝) and a discharge hose, which should be laid with a gradient to ensure that there are no kinks. In order to avoid increased condensation, the cooling water temperature should be adapted to match the required cooling capacity.

1. Condensate discharge (flexible)
2. Cooling water connection (flexible)

Benefits:
- Useful cooling capacity from 600 to 5000 W (2049 to 17,076 BTU)
- Also available with all water-carrying parts made from type 316 stainless steel (V4A)
- System for TS8 modular enclosure system integrated into the sidewall

Important:
- Air/water heat exchangers should always be used in conjunction with a chiller system or a cooling water circuit

For calculation formulas and requirements regarding water quality, refer to our website: www.rittal-corp.com

Benefits:

Filter Fan Units

Features

Filter fan units are ideal for cost effectively dissipating high heat loads. The prerequisite is that the ambient air must be relatively clean with a temperature below the desired enclosure internal temperature.

The entire range of filter fan units is now available with EMC shielding and all required rated voltages.

Fast assembly

Quick clip-on mounting
This guarantees quick, completely secure attachment of the filter fan unit. The prerequisites for ratings IP 54 (NEMA 12) are met as standard.

Changing the filter mat is quick and easy. The louvered grille is attached without screws providing quick access to the filter mat.

Inlet or outlet
The air direction may be quickly reversed from blowing (standard setting) to extracting. Simply rotate the fan by 180°.

Application diversity and functions

Not always full power
Air displacement may be reduced at lower ambient temperatures. Noise generation is reduced by adapting the filter fan speed to match the temperature using a controller.

Also available with EMC shielding
All filter fan units and outlet filters are available with EMC shielding. The required conductive connection is achieved by a metallic coating on the filter fan unit housing and a special sealing frame.

Hosed water protection
Particularly for applications in the food industry, the hose-proof hood prevents the ingress of moisture. The ratings of IP 56 (NEMA 3R) is achieved in conjunction with the filter mats.

Benefits:
- Air displacement of 20 m³/h to 700 m³/h (12 to 412 cfm)
- Quick assembly
- IP 54 (NEMA 12) as standard
- Air flow direction may be reversed from blowing (standard setting) to extracting
- All fans are also available with EMC shielding

Important:
- The prescribed heat loss and the maximum anticipated ambient temperature define the required volumetric flow
- Always use the filter fan units and outlet filters together
- For calculation formulas refer to our website: www.rittal-corp.com

1) Delivery times available on request.
2) For metal thickness > 2.5 mm (0.1”), the cutout H2/B2 (W) must be 1 mm (0.04”) larger.
3) RAL 7032 (pepple gray) on request.
Ratings available on request. We reserve the right to make technical modifications.
All rack-mounted climate control components are mounted directly on the 482.6 mm (19") rails. Positioning directly beneath the electronic components ensures effective cooling, and prevents the formation of hot spots.

**Features**

**Rack-mounted air conditioners**

Simple attachment to the 482.6 mm (19") rails
Sealed enclosures require a door cutout for the external air circuit.

A fully equipped front is essential in open enclosures. The set-point of the temperature controller is set by a service door.

**Useful cooling capacity**

1000 W, 6U (3415 BTU, 6U)

The heated air is drawn in, cooled, and blown out underneath the electronic equipment that is being cooled.

**Rack-mounted fan**

Vario rack-mounted fan
The rack-mounted fan slides into the guide frame like a drawer. Connectors on the rear ensure immediate contact.

Installation options for the guide frame: Directly in the subrack, by two mounting brackets on the 482.6 mm (19") rails.

Ideal for avoiding hot spots in fully populated enclosures.

**Centrifugal fan**

320 m³/h (188 cfm)
air displacement, 2U

High air displacement means that Rittal centrifugal fans are capable of dissipating large heat losses from the enclosure. Noise generation of only 52 dB maintains a pleasant environment.

Front outlet grille 2U for hot air outlet to the outside in the upper section of the enclosure.
Climate Control Tailored to Enclosures

Features

Ready-to-use, wired modules equipped with fans for numerous Rittal enclosure system platforms. Rittal Climate Control offers effective air displacement and minimal assembly work. Fan roofs, fan cross members for server enclosures (door installation), internal fan mounting panels and enclosure internal fans are all available.

Fan for integration into the door

For TS8 server enclosures: Door-mounted fans for server enclosures
Specificaly for installation in the tubular door frame of perforated doors.

Door-mounted fans for TS8 server enclosures
Specificaly for installing in perforated doors. The growing packaging density in data communications and network enclosures means that active, direct ventilation of the enclosure has become necessary. The doormounted fans, attached to the rear or front door, support horizontal air routing of the servers.

Fans for integration into the roof

For all enclosures: Roof-mounted fans, passive or active
May be integrated into any enclosure roof area with suitable dimensions for the mounting cutout.

For TS8 server enclosures: Fan roof, modular
In exchange for the existing roof plate. Fan and cable entry are pre-integrated.

For the office sector: Roof-mounted fan
Low noise generation and high performance for sensitive office areas. Unit consisting of TS roof plate and fan.

Air baffle systems

For TS8 server enclosures: Internal fan mounting panel
Twin-walled sidewall for targeted air routing.

Enclosure internal fan
Supports active climate control components and thereby selectively avoids hot spots.

For TS8: Air baffle system
Cold air from the hollow base is routed to the twin-walled door and distributed in a targeted manner.
**Rack-Mounted Air Conditioners**

For 482.6 mm (19”), useful cooling capacity 1000 W (3586 BTU)

! IMPORTANT:

For installation in a closed enclosure: Adaptor for front air supply and air duct for waste air, see accessories.

**Configuration:**

Wired ready for connection with connection cable (3 m (118”), including drilling template).

**Also required:**

Adaptor for front air supply and air duct for waste air, see accessories.

**Certifications:**

see page 19.

**Detailed drawing:**

see page 137.

Fan Systems

For TS8 server enclosures

Roof-mounted fan and vent attachment

For TS8 server enclosures

The active roof-mounted fan and the passive vent attachment (TS8801.380) integrate perfectly into the system wide mounting concept of Rittal Climate Control. They fit onto the cutouts of the small and medium performance category of TopTherm roof-mounted air conditioners.

They may also be mounted on any sufficiently large roof surface.

TS8 roof plates with prepared mounting cutouts are also available.

Roof-mounted fan configuration:

Unit ready to connect with built-in radial fan, sealing material and assembly parts.

Vent attachment:

see page 107.

Rating:

IP 43 to EN 60 529/10.91

Detailed drawing,

see page 138.

Roof-mounted fan

● The roof-mounted fan is easily installed using 6 screws. The sealing tape supplied can be used to seal the fan against the enclosure.

● The assembly screws are invisible from the outside.

● The roof-mounted fan casing has a large air outlet surface and labyrinthine air ducting.

Rating:

IP 43 to EN 60 529/10.91.

By additionally installing the filter holder with filter mat SK 3175.000, with roof vent SK 3148.000 a rating of IP 44 is achieved.

Configuration:

Fully wired unit ready for connection with built-in radial fan, sealing material and assembly parts, connection cable (3 m (118˝)), drilling template.

Accessories:

Filter holder,

see page 110.

Detailed drawing,

see page 138.

**Fan Systems**

**For TS/FR(i)**

---

**Roof-mounted fan**

*For TS/FR(i) for the office sector*

This new roof ventilation concept offers a wealth of performance, assembly and cost benefits associated with the use of integrated ventilation systems. This roof-mounted fan may be ordered with or without a roof plate. The enormous volumetric flow in proportion to exceptionally low noise levels make the roof-mounted fan ideal for use in sensitive office areas.

---

**Technical specifications:**

- Fitted onto a roof plate based on a TS8 server enclosure
- Easy assembly; the work of creating mounting cutouts has been eliminated
- Radial fan

**Configuration:**

Fully wired ready for connection, including assembly parts.

**TS8 air baffle system**

The system has an air inlet nozzle in the base frame. Cold air is drawn in from below and routed into the twin-walled door. The cold air is then distributed inside the rack with special covers. 15 covers are supplied with every door.

**Color:**

RAL 7035 (light gray)

Fan Systems

For TS/FR(i)

### Fan mounting panel

**For TS8 network enclosures**

The fan mounting panel may be retroactively installed in all TS8 network enclosures from above. The plate is mounted at the front of the enclosure and the rear section is left free for cable entry. To ensure targeted air routing a rubber cable clamp strip is supplied loose for optimum sealing at the rear and sides. Not suitable for crane transportation. Not suitable for combination with 482.6 mm (19˝) mounting frame.

The following combinations are possible:

- Solid roof plate raised with 20 or 50 mm (0.8 or 2.0˝) roof spacers
- Roof plate for cable entry raised with 20 or 50 mm (0.8 or 2.0˝) roof spacers
- Vented roof plate for cable entry

In conjunction with the large swing frame, usage is only possible from an enclosure depth of 800 mm (31.5”), in conjunction with a roof plate for cable entry from 900 mm (35.4”).

The air displacement can be increased with the fan expansion kit DK 7980.000.

#### Technical specifications for one fan:

- **Voltage:** 230 V~
- **Power consumption:** 15/14 W at 50/60 Hz
- **Air displacement (unimpeded air flow):** 160/180 m³/h (94/106 cfm), 50/60 Hz
- **Noise level (unimpeded air flow):** 37 dB (A)
- **Temperature range:** –10°C to +55°C (14°F to 131°F)

#### Technical specifications of thermostat:

- **Voltage:** 250 V
- **Temperature range:** +5°C to +55°C (41°F to 131°F)
- **Color:** RAL 7035 (light gray)

#### Configuration:

- 2 fans, 2/4 cutouts to extend to 4/6 fans, thermostat optional for attachment to the fan mounting panel or to the 25 mm (1˝) DIN pitch pattern of the enclosure,
- Rubber cable clamp strip.

Thermostat and fan fully wired to connection cable (2.5 m (98.4”)).

#### Accessories:

Fan expansion kit, see below.

### Fan expansion kit

For retrofitting various fan units or to supplement the fan mounting panel and fan roof, modular.

**Technical specifications DK 7980.000:**

- **Voltage:** 230 V~
- **Power consumption:** 15/14 W at 50/60 Hz
- **Air displacement (unimpeded air flow):** 160/180 m³/h (94/106 cfm), 50/60 Hz
- **Noise level (unimpeded air flow):** 37 dB (A)
- **Temperature range:** –10°C to +55°C (14°F to 131°F)

**Technical specifications DK 7980.100:**

- **Voltage:** 230 V~
- **Power consumption:** 14/12 W at 50/60 Hz
- **Air displacement (unimpeded air flow):** 108/120 m³/h (64/71 cfm), 50/60 Hz
- **Noise level (unimpeded air flow):** 34 dB (A)
- **Temperature range:** –20°C to +70°C (–4°F to 158°F)

**Technical specifications DK 7980.148:**

- **Voltage:** 48 V (DC)
- **Power consumption:** 7.7 W
- **Air displacement (unimpeded air flow):** 184 m³/h
- **Noise level (unimpeded air flow):** 42 dB (A)
- **Temperature range:** –20°C to +70°C (–4°F to 158°F)

#### Configuration:

Fan, including assembly parts and connection cable (0.61 m (24.0”)).

**DC fan mounting panel**

For TS8 server enclosure

Low-noise due to FCS speed control, fully fitted

Suitable for TS8 modular enclosures with a raised roof (> 20 mm (0.8")) or TS8 roof plate, vented. The fan mounting panel may be used as an alternative to fan mounting panel 7988.035. It is installed from above. A cable entry is prepared in the rear section of the plate. Not suitable for combination with 482.6 mm (19") mounting frame.

Advantages of the DC fan mounting panel with FCS technology:

- Low-noise due to speed control
- All fans are individually monitored for failure
- High air displacement due to DC technology (unimpeded air flow 6 x 165 m³/h (97 cfm) = 990 m³/h (583 cfm))
- EMC-compatible due to DC fan
- Temperature monitoring and control
- High level of safety due to low safety voltage with 24 V DC power pack
- Visual and acoustic alarm messages, and relay alarm output
- Freely selectable installation location for the FCS control unit (included with the supply of the fan mounting panel, in 482.6 mm (19") with 7320.440 or on the frame with 7320.450)
- Suitable for international use, due to wide-range power pack 100 – 240 V AC and socket to IEC 320
- Fully pre-configured
- Network compatible by CMC-TC processing unit 7320.100 (all relevant data such as temperature is displayed in the web browser, or alarms are sent in the form of an SNMP trap)

**Technical specifications:**

- Power pack voltage: 100 – 240 V AC, 50/60 Hz
- Power pack current: Max. 1.5 A
- Temperature range: +5°C to +40°C (41°F to 104°F)
- Total air displacement (unimpeded air flow): 6 x 165 m³/h (97 cfm) = 990 m³/h (583 cfm)

**Technical specifications for one fan:**

- Voltage: 24 V DC
- Rated current: max. 0.28 A
- Rated output: max. 6.72 W
- Air displacement (unimpeded air flow): 165 m³/h (97 cfm)
- Speed: 2650 rpm
- Noise level: up to 41.0 dB (A) at maximum speed activation

**Also required:**

**Accessories:**

- 1U mounting unit, Part no. 7320.440.
- Mounting module, Part no. 7320.450.

Fan Systems

For TS/FR(i)/TE

Fan roof, modular, two-piece
For TS/FR(i)
The modular roof plate consists of individual components and can be configured for the ventilation of TS8 modular enclosures in line with customer requirements.

The modules:

Roof plate, two-piece with cutout
For fan mounting and cable entry at the rear by a sliding angular bracket with rubber cable clamp strip. In exchange for the existing roof plate. The two-piece design allows convenient retrofitting of cables at any time.

Cover plate
To cover the cutout, available solid or vented. The top-mounted cover plate may be raised for extra air displacement using the supplied spacers.

Fan insert
For active ventilation:
A fully pre-wired fan tray including 2.5 m (98.4") connection cable, with two fan motors and additional cutouts. The air displacement may be increased with a fan expansion kit.

Material:
Sheet steel, painted

Color:
RAL 7035 (light gray)

Technical specifications for one fan:
Voltage: 230 V
Power consumption: 15/14 W at 50/60 Hz
Air displacement (unimpeded air flow): 160/180 m³/h (94 to 106 cfm) at 50/60 Hz
Temperature range: -10°C to +55°C (14°F to 131°F)

Detailed drawing, see page 138.

Accessories:
Fan expansion kit DK 7980.000. Thermostat SK 3110.000, see page 104. Speed control SK 3120.000, see page 105.

For TS/FR(i) TE 7000
For active ventilation of the TE 7000, a ventilation opening may be cut out of the front area in the standard roof plate and fitted with the fan module. The fan module is pre-wired ready for connection and has 2 fans, 1 thermostat and a connection cable including IEC 320 connector. An additional fan may be integrated.

Configuration:
Fan unit including assembly parts, 2 fans, thermostat and connection cable.

Technical specifications for one fan:
Fan extension kit.

Technical specifications of thermostat:
Voltage: 250 V
Temperature range: +5°C to +55°C (41°F to 131°F)

Also required:
Connection cable.

Accessories:
Fan expansion kit.

800-999-7378
800-999-7378
For TS8 modular server enclosures

**Door mounted fan**

For TS8 modular server enclosures, especially for installing in perforated doors. The growing packaging density in data communications and network enclosures make active, direct ventilation of the enclosure necessary. The door mounted fan, which is attached to the rear or front door, supports horizontal air routing for the servers and therefore facilitates faster heat dissipation from active components.

**Technical specifications:**
- Standard cross member with two fans.
- Air displacement, unimpeded air flow 600 m³/h (353 cfm).
- By adding two fan expansion kits, the air displacement may be increased to 1200 m³/h (706 cfm).
- The direction of air flow is easily reversed by rotating the fan.
- Several units may be positioned in a cascade arrangement.
- Simple mounting on the tubular door frame.

**Configuration:**
- Wired ready for connection with 2.5 m (98") connection cable, including assembly parts.

**Accessories:**
- Fan expansion kit, see below.

**Note:**
- Only for mounting on the tubular door frame.
- Door configuration for installation in 2- and 4-door ISP racks available on request.

Fan Systems

For TS8 modular server enclosures

Internal fan mounting panel
For TS8 modular server enclosures
A fan unit integrated into the TS8 twin wall for targeted air routing in the lower part of the enclosure. A second fan unit may optionally be mounted to reinforce air circulation. Optional air routing design may be achieved retroactively by inserting or exchanging cover plates.

Technical specifications:
- Voltage: 230 V, 50/60 Hz
- Air displacement (3 fans): (unimpeded air flow) 200/230 m³/h (118/135 cfm)
- Power consumption (3 fans): 5.7/54 W
- Rated current (3 fans): 0.36/0.33 A

Configuration:
1 pack =
1 internal fan mounting panel,
3 fan cross members,
3 cover plates.

Property rights:
German patent no. 198 04 219
European patent no. 1 053 581
with validity for ES, FR, GB, IT

Heaters

Features

Condensation poses a high risk for control electronics, in outdoor and indoor locations. Various output ratings ensure that the correct thermal output is always available. Therefore the total required thermal output can be distributed with complete accuracy inside an enclosure.

Simple assembly and perfect control

Fast assembly
This is achieved with a screw or snap fastening on the mounting panel or 35 mm (1.4”) EN 50 022 support rails.

No condensation, and always the right temperature
The heater is controlled as required by a hygrostat or enclosure internal thermostat.

Maximum performance in the outdoor sector

Fully wired unit ready for connection
Compact power with 1000 W (3415 BTU) thermal output.

19” rack mount
For seamless integration into the 482 mm (19”) structure, with 3 thermal components and 3 fan units. This creates circulation, so that condensation is reliably avoided.

Benefits:
● Continuous thermal output of 10 to 1000 W (34 to 3415 BTU)
● Self-regulating PTC technology
● Quick-assembly system

Important:
● For the correct temperature and to avoid condensation, use a thermostat or hygrostat, see page 104
● The thermal output is increased with fans
● Heaters should always be installed in an upright position. Leave a distance of 50 mm (2.0”) at the top and bottom to allow circulation
● Heat is distributed evenly in large enclosures by using several low-output heaters

General remarks and calculation formulas can be found on our website: www.rittal-corp.com
Enclosure Heaters

Continuous thermal output 10 – 300 W (34 – 1025 BTU)

**Configuration:**
Unit is ready to install with permanently attached connection cable (0.3 m (11.8˝)). SK 3102.000 with fitted fan including terminal strip.

**Note:**
- Thermostat SK 3110.000 (see accessories) is recommended for precise temperature control in the enclosure
- In order to prevent condensation on assemblies, hygrostat SK 3118.000 (see accessories) is recommended to regulate heating
- In larger enclosures, even heat distribution is best achieved by installing several low-output heaters
- Installation in the enclosure is generally advisable, even when using heat exchangers and air conditioners, in order to prevent condensation

**Certifications,** see page 21.
**Detailed drawing,** see page 138.

Finding the perfect climate control solution is easier than ever with matching system accessories. Perfectly coordinated components adapt the climate control components to your specific requirements. Be it targeted air routing or precise control of the equipment, Rittal has the ideal solution for any application.

**Features**

**Air routing**
- **Air duct system for TopTherm roof-mounted air conditioner and air/water heat exchanger**
  With the air duct system, cold air may be routed directly to specific areas of the enclosure.
- **Air diverter**
  For targeted, downward cold air routing in climate controlled enclosures, climate control doors and TopTherm wall-mounted air conditioners.
- **Adaptor**
  For unhindered front air intake when using rack-mounted air conditioners in enclosures with front doors.

**Controller**
- **Enclosure internal thermostat and hygrostat**
  Constant temperature and humidity control to protect sensitive electronics.
- **Speed control**
  Temperature-dependent speed control to minimize noise and save energy in part-load operation.
- **SK bus system**
  SK bus system with master/slave function to enable several air conditioners to communicate with one another.

**Installation/maintenance**
- **Fast assembly**
  Easy installation with prepared TS8 modular enclosure roof plates.
- **Hose-proof hoods**
  For ratings IP 55 (NEMA 12) to EN 60 529/10.91 with filter fan units and outlet filters.
- **Filter mats**
  For use in air conditioners under extreme conditions.
**Air duct system**

*For TopTherm roof-mounted air conditioners*

The air duct system for Rittal TopTherm roof-mounted air conditioners makes it possible to route the cold air directly to specific areas of the enclosure. The risk of short circuits in the air circulation due to self-ventilated installed devices is eliminated. The length of the flat duct is 1500 mm (59”), and it may be cut to the desired length.

**Material:**
Flame-resistant plastic to DIN 4102/B1.

**Configuration:**
Flat duct, compensating hose.

**Accessories:**
- 90° deflector
- Cover plugs

<table>

Accessories For Climate Control

Air routing

**Air diverter**
For use in climate controlled enclosures, climate control doors, climate control sidewalls and Top-Therm wall-mounted air conditioners.
For targeted routing of the cold air in a downward direction.
Particularly well-suited for densely-packed electrical components in the lower section of the enclosure.

**Material:** Sheet steel

**Adaptor**
For front air infeed
When using rack-mounted air conditioners SK 3278.134/SK 3292.134 in enclosures with front doors (sheet steel or acrylic), this adaptor must be used. It allows ambient air to be extracted unhindered from outside, which is essential for correct functioning of the air conditioner.

**Material:** Sheet steel

**Configuration:** Adaptor, sealing gasket, foamed plastic gasket, assembly parts.

Digital enclosure internal temperature display and thermostat
For installing on the enclosure door or wall and in an air conditioner or heat exchanger.

Technical specifications:
- Small dimensions
- Depth: 100 mm (3.9")
- The 3-digit 7-segment display is 13 mm (0.5") high and clearly legible
- Can be switched from °C/°F
- The display can be used in a temperature range from +5°C to +70°C (41°F to 158°F)
- With 1500 mm (59") long NTC sensor
- Two relay outputs as change-over contact and normally open contact (maximum contact load 230 V, 6 A)
- Freely selectable switching difference
- The freely adjustable setpoint values can be adjusted by the membrane keyboard at the front. Setting range: +5°C to +55°C (41°F to 131°F)
- Display and switching accuracy +/- 2 K
- Mounting cutout 68 x 33 mm (2.7 x 1.3")
- Storage of the minimum and maximum recorded temperature until the system is reset

Accessories For Climate Control

Regulation/control

Enclosure internal thermostat

Ideal for controlling filter fan units, heaters and heat exchangers, this thermostat can also be used as a signal generator for monitoring the enclosure internal temperature.

Technical specifications:
- Bi-metal sensor as a temperature-sensitive element with thermal feedback
- Contact population: Single-pole change-over contact as a quick-break contact
- Permissible contact load:
  - AC 10 (4) A
  - DC = 30 W
  - Category 5 – 3 (heating)
  - AC 5 (4) A
  - DC = 30 W
  - Setting range +5°C to +60°C (41°F to 140°F)
  - Weight approximately 105 grams (3.7 oz)
  - Dimensions 71 x 71 x 33 mm (2.8 x 2.8 x 1.3˝)
  - Switching difference approximately 1 K ± 0.8 K
- A broad voltage spectrum, just one model covers 24 to 230 V
- Time-saving connection technique using a terminal strip with a screw connection from the outside.
- Flexible mounting on a vertical or horizontal 35 mm (1.4˝) support rail to EN 50 022, and snap fastening in the TS/ES enclosure section using the supplied adaptor.

Voltage | Part No. SK
--- | ---
230/115/60/48/24 V (AC) | 3110.000
60/48/24 V (DC) | 3110.000

Hygrostat

The hygrostat switches on the heater and/or fan when a preset relative humidity level in the enclosure is exceeded. The relative humidity is raised above the dew point, and condensation on assemblies or electronic components is avoided.

Technical specifications:
- Contact population: Single-pole change-over contact as a quick-break contact
- Permissible contact load:
  - AC – 5 (0.2) A
  - DC = maximum 20 W
  - Setting range 50 – 100 % relative humidity
  - Weight approximately 100 g (3.5 oz)
  - Dimensions 71 x 71 x 33.5 mm (2.8 x 2.8 x 1.3˝)
  - Switching difference approximately 4 %
- A broad voltage spectrum, just one model covers 24 to 230 V
- Time-saving connection technique using a terminal strip with a screw connection from the outside.
- Flexible mounting on a vertical or horizontal 35 mm (1.4˝) support rail to EN 50 022, and snap fastening in the TS/ES enclosure section using the supplied adaptor.

Voltage | Part No. SK
--- | ---
24 – 230 V (AC/DC) | 3118.000

Bottom-mounted adaptor

For enclosure internal thermostat SK 3110.000 and hygrostat SK 3118.000

Bottom-mounted adaptor with mounting option for screwed cable glands, for targeted cable infeed from appropriate equipment such as SK filter fan units and enclosure heaters. In conjunction with screwed cable glands, it is also suitable for use as strain relief.

### 4.1 Accessories For Climate Control

#### Speed control
Temperature dependent speed control for Rittal filter fan units and air/air heat exchangers with a voltage of 230 V AC, for noise reduction and to save energy in part-load operation.

**Technical specifications:**
- For mounting on a 35 mm (1.4˝) support rail EN 50 022
- Dimensions (H x W x D): 57 x 94 x 180 mm (2.4 x 3.7 x 7.1˝)
- Voltage: 230 V (AC)/115 V (AC)
- Setting range: +20°C to +55°C (68°F to 131°)
- Phase cross-over with microcontroller
- Maximum fan output 250 W or 1.2 A at 230 V (AC)
- Maximum fan output 100 W or 1.2 A at 115 V (AC)

**Technical specifications:**

<table>
<thead>
<tr>

</tbody>
</table>

1) Delivery times available on request.

**Configuration:**
Speed control, built into a PK enclosure 9512.100, NTC sensor, length 1.80 m (71˝).

#### Mounting adaptor
For speed control
The mounting adaptor enables direct attachment of the speed control SK 3120.000/115 to the vertical frame sections of network enclosures.

**Material:**
Sheet steel, zinc-plated, passivated.

**Configuration:**
Mounting adaptor including assembly parts.

#### Interface card
For TopTherm air conditioners with comfort controller
The interface card is an extension for TopTherm air conditioners with comfort controller. In this way it is possible, to monitor a master/slave combination of up to 10 air conditioners. Control is achieved by standardized interfaces: RS232 (DB9) or RS 485, one PLC interface (DB9).

- RS 422 (RJ 45 jack) is the connection to the Rittal CMC-TC.
- Remote monitoring by TCP-IP, graphical interfaces for operation, evaluation and control, documentation, connection to additional sensors for access control, monitoring is therefore possible. The extension card is built into a 1 U plastic housing. A voltage supply of 24 V DC is needed. This may be supplied from the CMC-TC by a wide-range power pack DK 7320.425 (100 to 240 V AC, 50/60 Hz) or externally by a Kycon connector.

**Configuration:**
Interface card integrated into a plastic box
H x W x D mm (inches): 44 or 1 U x 136 x 129 (1.7 or 1 U x 5.4 x 5.1).
Serial SUB-D cable, 1.5 m (59˝).

SK bus system
The SK bus system facilitates communications between several enclosure air conditioners, Top-Therm .500/.510/.540, production date 05/02 or later, by a master/slave construction such as that required in complex bayed enclosure systems for optimum operating results.

Technical specifications:
The master/slave construction facilitates common activation and deactivation by door limit switches, parallel activation and deactivation by a temperature setpoint, and common collective fault signals and temperature logging, thereby eliminating the need for intricate wiring.

Configuration:
3 m (118˝) shielded interface cable, including operating manual on programming the air conditioners.

Note:
\[ n_B = n_K - 1 \]

Property rights:
German patent no. 196 15 469

Cable connection kit
For CS outdoor air conditioners
For simple connection of CS air conditioners. All cables preassembled with the corresponding connectors. Length of cables approximately 2500 mm (98˝).

Configuration:
1 set = 3 cables for AC, door operated switch and alarm connection.

Option
3 cables for AC/DC and alarm connection 9765.110
2 cables for AC/DC and alarm connection 9765.115

Test adaptor
For CS outdoor climate control equipment
The 9-pole sub-D interface allows testing of all CS climate control equipment. Alternatively supports automatic or manual test procedures.

Configuration:
1 set = test adaptor including 2 m (78.7˝) connection cable.
**Roof plates TS**

For mounting on:
- TopTherm roof-mounted air conditioners
- TopTherm roof-mounted fan
- Vent attachment TS

The cutouts in the roof plate are arranged in such a way that the TopTherm roof-mounted air conditioners are positioned centrally on the enclosure.

**Material:**
Sheet steel

**Configuration:**
Assembly parts.

**Color:**
RAL 7035 (light gray)

---

**Vent attachment TS**

For passive ventilation with labyrinthine air flow routing, to match the roofs for TopTherm roof-mounted air conditioners.

**Color:**
RAL 7035 (light gray)

**Rating:**
IP 43

**Configuration:**
Assembly parts.

---

**Trim frame**

For slimline air conditioners

Slimline air conditioners can be internally or externally mounted on an enclosure door or wall. The trim frame presents a closed front for the air conditioner.

**Material:**
Sheet steel

**Color:**
RAL 7035
Quick-change frame
For TopTherm roof-mounted air conditioners
The quick-change frame is more than just an alternative to the standard air conditioner frame. Combined with the seal, the lower part of the frame is screw-fastened to the enclosure. This allows the plug-in air conditioner to be attached or removed from the top part of the quick-change frame that was previously mounted on the air conditioner using quick-release fasteners. In case of servicing, this means minimal assembly time and minimal downtime. The quick-change frame offers effective protection against the ingress of oil into the enclosure in oily atmospheres, due to its integrated drainage trough.

Material:
Sheet steel
Color:
RAL 7035 (light gray)
Configuration:
Quick-change frame, seal, quick-release fasteners.

Electronic condensate evaporator
For external mounting on enclosures.
For use with all enclosure air conditioners and air/water heat exchangers.
Evaporation performance:
1) 2.4 l/d (0.6 gal/d)
2) 4.2 l/d (1.1 gal/d)
Color:
RAL 7035 (light gray)
Configuration:
Electronic condensate evaporator, ready for connection.

Condensate collecting bottle
For mounting on the enclosure.
For use with all enclosure air conditioners and air/water heat exchangers.
Safety overflow at the side.
Capacity approximately 0.75 l (0.2 gal).

Condensate hose
For removing and forwarding condensate. For connecting to enclosure air conditioners.
Material:
PVC, transparent
Configuration:
10 m (394") hose.

For devices  | Material thickness Ø  | Part No. SK
---         | (mm)                   | ---
SK 3302... | 8 x 1.5 mm (0.06")    | 3301.608

</tbody>
</table>

For RAL 7032 (pebble gray), use order extension .200.

### Hose-proof hoods
For filter fan units/outlet filters  
When the hose-proof hood is mounted above the filter fan unit and outlet filter in conjunction with a fine filter mat, a rating of IP 56 (NEMA 3R) to EN 60 529/10.91 is achieved. Particularly suitable for use in the food industry.

**Material:** Stainless steel  
**Rating:** In conjunction with the filter fan units/outlet filters, NEMA 3R + 12 is met.

Accessories For Climate Control

General

Front outlet grille 2U
For centrifugal fans
This front outlet grille is required if a 482.6 mm (19") cross-flow blower (SK 3144.000/SK 3145.000) is used in the lower section of the electronic enclosure and the hot air is to be expelled to the outside from the upper section of the enclosure. The design of the grille matches that of the intake grille in the cross-flow blower. These grilles can also be used as simple inflow and outflow grilles with natural convection.

Metal filter
When air conditioners are used in dusty and damp environments, it is advisable to use washable metal filters. If air or steam condenses on the metal surfaces, any particles that may be present will adhere to the metal and are easily washed out with water or grease-dissolving detergents.

Material:
Aluminum
Thickness: 10 mm (0.4")

From passive air climate control to active liquid cooling of high-performance CPUs, Rittal provides all the required components and systems, designed to your requirements. Software-assisted planning and calculation of requirements, together with modular, rack-compatible technology, help to minimize investment costs, thereby offering a future safe solution with a high degree of flexibility.

**Liquid cooling package**

- Modular, upgradeable and temperature neutral cooling concept. 12 kW (40,982 BTU) cooling capacity, with three cooling modules supported per cooling rack.
- **Optimized air routing**
  Cold air is blown in at the sides, so that the cold air is evenly distributed in front of the 482.6 mm (19") level.
- Optionally 1 or 2 server racks may be cooled — both stand-alone and bayed siteings are possible. Bayable to TS and PS server racks, even retroactively.

**Rack-mounted chiller system**

- Microcontroller control
- **Liquid-cooled computers**
  In a 482.6 mm (19") server rack are supplied by the shortest route by six cooling circuits, without the need for an additional rising main.
- **Vibration-free installation**

**Cooling circuit distributor for processor climate control**

- The distribution pipes for inlet and return lines for targeted, reliable liquid cooling may be integrated into all standard rack systems.
- **Cooling circuit distributor kit**
  Blade server
  The 482.6 mm (19") distributors are connected to the rising main.
- **Cooling circuit distributor**
  482.6 mm (19")
  Connections for 10 servers and a main connection to the vertical rising main.

Modular, upgradeable and temperature neutral cooling concept.

- Maximum cooling capacity 12 kW (40,982 BTU), with three cooling modules possible per cooling rack
- Approximate cooling capacity 4 kW (13,661 BTU) per cooling module at 800 m³/h (471 cfm) air displacement
- Optimized air routing: Cold air is blown in at the sides, so that the cold air is evenly distributed in front of the 482.6 mm (19”) level

Optionally 1 or 2 server racks may be cooled – stand-alone and bayed siting possible

- Active condensate handling
- Optional control and monitoring of the cooling rack via Rittal CMC-TC
- Two-piece modules; for easy installation in narrow passageways
- Optionally 1 or 2 server racks may be cooled – stand-alone and bayed siting possible
- Bayable to TS and PS server racks, even retroactively
- Active condensate handling
- Optional control and monitoring of the cooling rack via Rittal CMC-TC
- Two-piece modules; for easy installation in narrow passageways

Technical specifications:

- Mounted as a cooling rack on a server rack based on TS8 modular enclosure, with H = 2000 mm (78.7”), D = 1000 mm (39.4”).
- Each cooling rack can accommodate a maximum of three air/water heat exchanger cooling modules.
- Standard supply: Cooling rack equipped with one cooling module.
- Individual modules upgradable to full installation by quick-release couplings.
- Controlled by a separate module which may be connected to the CMC-TC for incorporation into the network (monitoring).
- Condensation management: The pump in the condensate tray pumps any condensation into the return section of the cooling circuit.

For professional installation of the heat exchanger, where possible, the enclosures being cooled should be sealed against the ingress of ambient air:

- Connection cable with earthing-pin plug: Water: 1/4” quick-release fastener
- Weight in kg (lb): Maximum 160 (352.7) Approximately 25 (55.1)
- Color: RAL 7035 (light gray)

Cooling

Rack-mounted chiller system

Liquid-cooled computers in a 482.6 mm (19”) server rack are supplied by the shortest route by six cooling circuits, without an additional rising main.

- Partial liquid cooling in diverse environments
- Combination of air and liquid cooling possible

Technical specifications:
- Installation in the 482.6 mm (19”) level of the enclosure
- 6 cooling circuit connections for server/CPU cooling on the back of the chiller via drip-free quick-release couplings
- Vibration-free installation
- 2 freely programmable alarm outputs
- Operating pressure display
- Optional automatic bypass

Also required:
- Quick-release couplings
- Heat sink, retaining clamps
- Hose, see page 118.

Cooling manifold for racks

Water cooling
High performance for CPUs, power packs and disk drives by cooling directly at the area where heat is generated. The manifold pipes for inlet and return lines for targeted, reliable liquid cooling may be integrated into all standard rack systems.

They are linked to an external, central air conditioner which also controls the inlet temperature. The drip-free quick-release coupling ensures an extremely high level of operational reliability. Monitoring of the systems function is performed by the Rittal CMC-TC module.

There are 2 complete basic packages available for retrofitting for different enclosure heights.

Configuration:
Package 1
Water intake:
Connection system, non-return valve and 10 m (394") hose, \( \frac{1}{2}" \) fittings, filter, vent valve.

Water distribution:
Cooling circuit distributor for 20 CPU cooling circuits, vent valve, 40 bulkhead couplings, 50 m (164' or 52.5 yards) distributor hose, 6 mm (0.2").

Package 2
Water intake:
Connection system, non-return valve and 10 m (394") hose, \( \frac{1}{2}" \) fittings, filter, vent valve.

Water distribution:
Cooling circuit distributor for 40 CPU cooling circuits, vent valve, 80 bulkhead couplings, 100 m (328' or 109 yards) distributor hose, 6 mm (0.2").

Also required:
Chiller system, see page 50 onwards.

Accessories:
Manifold accessories.

Cooling circuit manifold kit

For blade server
Our liquid cooling for server racks serves as a basis for this solution. The large number of drip free taps to the individual computer is now replaced by the connection of horizontal liquid subdistributors, where the drip-free connectors for connection of the Powerblade are found. 5 units are possible with 7U per server and 1 per 482.6 mm (19") distributor. The individual 482.6 mm (19") distributors are connected to the rising main with drip-free connectors, so that the system is modular and scaleable.

Configuration:
1 vertical rising main with 5 taps,
1 482.6 mm (19") cooling circuit distributor with 10 inlet and return connections,
1 connection hose (inlet and return) from the 482.6 mm (19") cooling circuit distributor to the vertical rising main,
1 connection hose (inlet and return) from the vertical rising main to the chiller.

Also required:
Chiller system, see page 50 onwards.

Accessories:
482.6 mm (19") distributor, distributor accessories.
Cooling

Power Cooling System PCS

Cooling circuit manifold 19"
For installation in the 482.6 mm (19") level with drip-free connections for 10 servers and a main connection to the vertical rising main; 0.5 m (19.7") hose in each case for the inlet and return.
