SMS 4 / SMS 5 safety mat
Product information
Safety mats are used for the protection of man on machinery and plants with hazardous movements. Typical fields of application are, for instance, the protection of hazardous areas and surfaces on wood-processing machines, scissor lifts or punching presses. The safety mats build a uniplanar safety device, which detects the presence of persons. If a person steps onto the safety mat, the connected safety-monitoring module will immediately stop the hazardous movement.

The safety mats can be connected in line with each other in order to provide for a smooth and fast protection of hazardous areas. To this end, different standard sizes are available. Furthermore, special sizes or special shapes can be realized upon request. The SMS 4 series is connected to the floor by means of an aluminium profile and special corner sections. As a result of the beveled form of the profile, tripping hazards are avoided. The aluminium profile additionally serves as edge protection, when fork-lift trucks or other floor conveyors drive over the safety mats.

In the SMS 5 series, the polyurethane actuating profile is directly moulded to the active surface of the safety mat. The safety mats are characterized by their very robust design and high resistance to acids, caustic solutions, oil and gasoline. In combination with the SRB 301HC/R or SRB 301HC/T safety-monitoring modules, the safety mats meet the requirements of control category 3 to EN 954-1.

The safety mat consists of two separate current-carrying steel plates. The plates are held apart by insulating strips. Upon actuation of the pressure-sensitive safety mat, an electrical cross-wire short is produced between the steel plates. The connected safety-monitoring module evaluates this signal and stops the hazardous movement.

SMS 4 / SMS 5 safety mats
Safety distance

The proper arrangement of the safety mat with regard to the adjacent hazardous area mainly depends on the after-travel time of the machine and the approaching speed of the operator. The standard EN 999 (Safety of Machinery, Approaching Speed of Body Members) provides a formula to calculate the safety distance for this connection.

Safety distance

\[ S = K \times (T_1 + T_2) + (1200 - 0.4H) \]

- **S**: Minimum safety distance in millimetres, measured from the hazardous area to the detection point, the detection line or the protected field
- **K**: Constant in millimetres per second, derived from data through the approaching speed of the body or the body member (1600 mm/s)
- **H**: Distance through the reference plane (e.g. the floor) in millimetres (for safety mats generally 0 mm)
- **T1**: The maximum response time of the safety device between the triggering of the perceptive element (the safety mat) and the time, at which the safety guard (safety-monitoring module) has switched the output signal to the "OFF" state.
- **T2**: The response time of the machine, i.e. the time required to shutdown the machine or to eliminate the risk, after the transmission of the output signal of the safety guard

The safety distance therefore generally can be calculated in the following way:

\[ S = 1600 \text{ mm/s} \times (T_1 + T_2) + 1200 \text{ mm} \]

**Example:**

The safety distance must be calculated with a response time of 142.5 ms for the machine and a response time of 45 ms for the safety guard. The safety mat is installed at ground level.

\[ S = 1600 \text{ mm/s} \times (0.045 + 0.1425) + 1200 \text{ mm} \]
\[ S = 1600 \text{ mm/s} \times 0.1875 \text{ s} + 1200 \text{ mm} \]
\[ S = 300 \text{ mm} + 1200 \text{ mm} \]
\[ S = 1500 \text{ mm} \]
Safety mats

SMS 4

- Certified to EN 1760-1
- Control category 3 to EN 954-1 in combination with safety-monitoring module SRB 301HC/R
- Response time max. 25 ms
- Robust design
- High resistance to chemicals
- Slip-free surface
- Cascading possible
- Special sizes and shapes available on request
- No additional terminating resistor required
- Aluminium frame and corner sections available

SMS 5

- Certified to EN 1760-1
- Control category 3 to EN 954-1 in combination with safety-monitoring module SRB 301HC/R
- Response time max. 25 ms
- Robust design
- High resistance to chemicals
- Slip-free surface
- Cascading possible
- Special sizes and shapes available on request
- No additional terminating resistor required
- With moulded ramp profile

Technical data

- Standards: EN 1760-1
- Control category: 3 to EN 954-1
- Surface material: polyurethane, black
- Protection class: IP 65 to EN 60529
- Ambient temperature: 0°C ……60°C
- Fitting height: 14 mm
- Weight: 17 Kg / m²
- Actuating force: 150N
- Cable: 4 x 0.34 mm² SMS 4
  2 pc. 2 x 0.34 mm² SMS 5
- Cable length: 6m
- Response time: ≤ 25 ms
- Mechanical life: >1.5 million operations
- Admissible load: 2000 N / 80 mm ø
- Inactive edge: ≤ 10mm

Note

Chemical resistance:
- Water: Good
- 10% acids: Resistant
- 10% caustic solutions: Resistant
- Oils: Resistant
- Gasoline: Resistant
- Other on request

Legend:
A: active surface
Total size = A + 2 x 35 mm

Ramp rail
3000 mm long
SMS 4-RS 3000

Fixing rail
3000 mm long
SMS 4-BS-3000

Corner section (1 pc)
SMS 4-EV
Standards: IEC/EN 60204-1, IEC/EN 60947-5-1, EN 954-1, BG-GS-ET-20

Classification to EN 954-1: control category 4

Start conditions: automatic or start button (optionally monitored)

With feedback circuit (Y/N): yes

ON delay with reset button: ≤ 50 ms
Drop-out delay on "emergency stop": ≤ 20 ms
Drop-out delay on "supply failure": ≤ 100 ms

Rated operating voltage $U_{op}$: 230 VAC; 24 VAC/DC

Frequency range: 50 / 60 Hz

Fuse rating for the operating voltage:

- 230 VAC version: primary side: melting fuse, tripping current >1.0 A; secondary side: internal electronic fuse, tripping current > 0.12 A;
- 24 VAC/DC version: internal electronic fuse, tripping current > 0.5 A

Internal electronic fuse (Y/N): 230 VAC version: no; 24 VAC/DC version: yes

Current consumption:

- 230 VAC version: 1.6 W; 4.2 VA
- 24 VAC/DC version: 1.4 W; 3.3 VA

Inputs monitoring:

- Cross-wire detection: yes
- Wire breakage detection: yes
- Earth leakage detection: yes

Number of NC contacts: 2
Number of NO contacts: 0
Max. total line resistance: 40 Ω

Outputs:

- Stop category 0: 3
- Stop category 1: 0
- Number of safety contacts: 3
- Number of signalling outputs: 1

Max. switching capacity of the safety contacts: 250 VAC, 8 A ohmic (inductive with suitable protective circuit)

Utilisation category to EN 60947-5-1:

- AC-15: 230 V / 6 A
- DC-13: 24 V / 6 A

Mechanical life: $10^7$ operations

Ambient conditions:

- Operating ambient temperature: –25°C … + 60°C
- Storage and transport temperature: –25°C … + 85°C
- Protection class: enclosure: IP 40, terminals: IP 20, terminal space: IP 54
- Mounting: snaps onto standard DIN rails to DIN EN 60715

Connection type: plug-in type screw terminals

min. cable section: 0.25 mm²
max. cable section: 2.5 mm²

Current consumption:

- 230 VAC version: 340 g
- 24 VAC/DC version: 320 g

Dimensions (height/width/depth): 100 x 45 x 121 mm

Note: Inductive loads (e.g. contactors, relays, etc.) are to be suppressed by means of a suitable circuit
Safety mats

Note

• Protection of a safety mat to Control Category 3 to EN 954-1 and EN 1760-1
• Start button with edge detection
• Feedback circuit to monitor the external contactors
• Series-wiring of multiple safety mats possible
• Reset button

Wiring example

Note

The wiring example is shown with the safety mat in non-actuated and de-energized condition.
