Ionizer
Nozzle type

Dust removal and static electricity elimination by air blow
- Eliminates dust clinging to lamp cover.

Spot type static electricity elimination
- Prevents electrostatic breakdown of electric parts.
- Prevents detachment failure.

Removing dust from lamp cover
Eliminating static electricity from IC chip

Ion balance $\pm 10$ v (In case of energy saving static electricity elimination nozzle)

Slim design: Thickness dimension 16 mm

RoHS compliant

1. Electrode needle contamination detector
   Outputs maintenance signal when detects stain or wear of an electrode needle always.
   Detects optimal maintenance time, reduced labor for maintenance.

2. With built-in power supply substrate
   High-voltage power supply cable/external high-voltage power supply are unnecessary.

Series IZN10
Nozzle type can be selected according to applications.

Short range static electricity elimination, Design focuses on ion balance.

**Ion balance:** ±10 V

Increases flow volume by external air intake

Static electricity elimination is possible with minimal air consumption.

In cases with same air consumption, static electricity is eliminated in half the time.

*At 300 mm distance

Reduced by 50%

Improved 6 times

- Prevents electrostatic breakdown of electric parts.
- Removes dust from lens.
- Prevents adhesion of dust.
- Prevents static electricity charging when opening bags.
- Prevents static electricity cling on the inside of candy bags.

High flow static electricity elimination nozzle

**Ionized air assisted by the compressed air**

- Improved dust removal performance by the energy of compressed air.
- Suitable for static electricity elimination at a long distance (max. 500 mm).

**Ion balance:** ±15 V

- Prevents problems with the separation of molded plastic goods.
- Removes dust clinging to cup interiors.
- Prevents clogging of parts feeder.

Long range static electricity elimination and dust removal

- Eliminating static electricity from an electric substrate
- Eliminating static electricity from lens
- Eliminating static electricity from packing films
- Eliminating static electricity from molded goods
- Eliminating static electricity from plastic cups
- Eliminating static electricity from parts feeder

Features 1
**External switch input function (2 inputs)**

Prevents static electricity elimination trouble due to pressure drop of compressed air.

Emission of static electricity is suspended when abnormal purge air pressure is detected by pressure switch.

Energy saving with electrostatic sensor

Emission of static electricity is suspended when an electrostatic sensor detects that static electricity elimination is completed.

**Easy maintenance**

Possible to conduct maintenance on the electrode needle without removal of body.

No need to readjust the nozzle angle when the ionizer is restarted.

- Possible to conduct maintenance without removal of body.
- Tools unnecessary for the installation or removal of the cartridge!
Mounting variations

**Direct mount**

- Top through-hole mounting
- Bottom tapped mounting

**Bracket mount**

- L-bracket
- Pivoting bracket
- DIN rail mounting bracket

Features 3

- The L-bracket and the DIN rail mounting bracket can be used with the manifold.
Series IZN10

Technical Data 1

Static Electricity Elimination Characteristics
(Static Electricity Elimination Time from 1000 V to 100 V)

1) Energy saving static electricity elimination nozzle / IZN10-01

2) High flow rate nozzle / IZN10-02

![Graph 2](image)

3) Female threads for piping / IZN10-11

With Stainless steel 316 one-touch fitting / KQG + Anti-static tubing / TA

KQG06-01S + TA/L52408 0604 (Tube I.D.: 4 mm)

KQG08-01S + TA/L52408 0805 (Tube I.D.: 5 mm)

Note 1) If a pressure over the maximum operating pressure is applied, the electrode needle contamination detector will work and turn on the LED.

- The ion generating efficiency of the high frequency AC type ionizer will decrease when the pressure around the electrode needle reaches 0.1 MPa or more, due to its ion generating mechanism. This means that even when the electrode needle is not contaminated, the electrode needle contamination detector may work depending on the condition of the connected tube and other reasons.
- In the range where the contamination detection signal is generated, a small amount of ions are still generated, so it can be used in some operating conditions. In this case, please consider using a type without the contamination detector. (Page 5)
- When the tube is connected using the female threads for piping / IZN10-11, be sure to check static electricity elimination performance beforehand.

Note 2) The ionizer generates a small amount of ozone. Select ozone-resistant fittings for the female threads for piping. Also, regularly check there is no deterioration due to ozone.

</table>

Note 1) Measured with a probe of 1000 MΩ and 5 pF.
Note 2) Measured with a distance of 100 mm between the charged object and ionizer at an air purge pressure of 0.3 MPa.
For the static electricity elimination time, refer to technical data on page 1.
Note 3) Value above background level, measured with a distance of 300 mm from the front of the nozzle at an air purge pressure of 0.3 MPa.
Note 4) Static electricity cannot be eliminated without air purge.
Also, failure of air purge can increase internal ozone condensation, adversely affecting the ionizer and peripheral equipment. Be sure to perform air purge while energizing the ionizer.
Functions

1. Electrode needle contamination detection
   Detects lowered static electricity elimination performance due to contamination or wear of the electrode needle. The maintenance LED lights up and maintenance signal is generated.

2. Signal inputs by external switch
   There are 2 ports for external switch signal inputs.

Wiring

### Input signal

NPN: The signal is turned on when the power supply GND is connected, and turned off when disconnected.

PNP: The signal is turned on when the power supply 24 V is connected, and turned off when disconnected.

### Output signal

NPN: The signal is turned on when the output transistor is energized (by the power supply GND inside the ionizer), and turned off when de-energized.

PNP: The signal is turned on when the output transistor is energized (by the 24 V power supply inside the ionizer), and turned off when de-energized.

### Provide Grounding

- Provide class D ground to the tap for ground wiring or metal (shaded) parts around the external face of the ionizer.
- If grounding is not provided or is incomplete, the ionizer will not be able to achieve its specified static electricity elimination performance.
- Also, the maintenance signal will be generated.

Safety Instructions

These safety instructions are intended to prevent hazardous situations and/or equipment damage. These instructions indicate the level of potential hazard with the labels of “Caution,” “Warning” or “Danger.” They are all important notes for safety and must be followed in addition to International Standards (ISO/IEC), Japan Industrial Standards (JIS)*1 and other safety regulations*2.

*1) ISO 4414: Pneumatic fluid power -- General rules relating to systems.
    ISO 4413: Hydraulic fluid power -- General rules relating to systems.
    IEC 60204-1: Safety of machinery -- Electrical equipment of machines. (Part 1: General requirements)
    JIS B 8370: General rules for pneumatic equipment.
    JIS B 8361: General rules for hydraulic equipment.
    JIS B 9960-1: Safety of machinery - Electrical equipment of machines. (Part 1: General requirements)
    etc.

*2) Labor Safety and Sanitation Law, etc.

Caution: Operator error could result in injury or equipment damage.

Warning: Operator error could result in serious injury or loss of life.

Danger: In extreme conditions, there is a possibility of serious injury or loss of life.

Warning

1. The compatibility of the product is the responsibility of the person who designs the equipment or decides its specifications.
   Since the product specified here is used under various operating conditions, its compatibility with specific equipment must be decided by the person who designs the equipment or decides its specifications based on necessary analysis and test results. The expected performance and safety assurance of the equipment will be the responsibility of the person who has determined its compatibility with the product. This person should also continuously review all specifications of the product referring to its latest catalog information, with a view to giving due consideration to any possibility of equipment failure when configuring the equipment.

2. Only personnel with appropriate training should operate machinery and equipment.
   The product specified here may become unsafe if handled incorrectly. The assembly, operation and maintenance of machines or equipment including our products must be performed by an operator who is appropriately trained and experienced.

3. Do not service or attempt to remove product and machinery/equipment until safety is confirmed.
   1. The inspection and maintenance of machinery/equipment should only be performed after measures to prevent falling or runaway of the driven objects have been confirmed.
   2. When the product is to be removed, confirm that the safety measures as mentioned above are implemented and the power from any appropriate source is cut, and read and understand the specific product precautions of all relevant products carefully.
   3. Before machinery/equipment is restarted, take measures to prevent unexpected operation and malfunction.

4. Contact SMC beforehand and take special consideration of safety measures if the product is to be used in any of the following conditions.
   1. Conditions and environments outside of the given specifications, or use outdoors or in a place exposed to direct sunlight.
   2. Installation on equipment in conjunction with atomic energy, railways, air navigation, space, shipping, vehicles, military, medical treatment, combustion and recreation, or equipment in contact with food and beverages, emergency stop circuits, clutch and brake circuits in press applications, safety equipment or other applications unsuitable for the standard specifications described in the product catalog.
   3. An application which could have negative effects on people, property, or animals requiring special safety analysis.
   4. Use in an interlock circuit, which requires the provision of double interlock for possible failure by using a mechanical protective function, and periodical checks to confirm proper operation.
Safety Instructions

Caution

1. The product is provided for use in manufacturing industries.
   The product herein described is basically provided for peaceful use in manufacturing industries.
   If considering using the product in other industries, consult SMC beforehand and exchange specifications or a contract if necessary.
   If anything is unclear, contact your nearest sales branch.

Limited warranty and Disclaimer/Compliance Requirements

The product used is subject to the following “Limited warranty and Disclaimer” and “Compliance Requirements”.
Read and accept them before using the product.

Limited warranty and Disclaimer

1. The warranty period of the product is 1 year in service or 1.5 years after the product is delivered.\(^{3}\)
   Also, the product may have specified durability, running distance or replacement parts. Please consult your nearest sales branch.
2. For any failure or damage reported within the warranty period which is clearly our responsibility, a replacement product or necessary parts will be provided.
   This limited warranty applies only to our product independently, and not to any other damage incurred due to the failure of the product.
3. Prior to using SMC products, please read and understand the warranty terms and disclaimers noted in the specified catalog for the particular products.

\(^{3}\) Vacuum pads are excluded from this 1 year warranty.
   A vacuum pad is a consumable part, so it is warranted for a year after it is delivered.
   Also, even within the warranty period, the wear of a product due to the use of the vacuum pad or failure due to the deterioration of rubber material are not covered by the limited warranty.

Compliance Requirements

When the product is exported, strictly follow the laws required by the Ministry of Economy, Trade and Industry (Foreign Exchange and Foreign Trade Control Law).
Series IZN10
Specific Product Precautions 1
Be sure to read this before handling.

⚠️ Warning

1. This product is intended to be used with general factory automation (FA) equipment.
   If considering using the product for other applications (especially those stipulated in 4 on back page 1), please consult with SMC beforehand.

2. Use this product within the specified voltage and temperature range.
   Using outside of the specified voltage can cause a malfunction, damage, electrical shock, or fire.

3. Use clean compressed air for fluid.
   This product is not explosion proof. Never use a flammable gas or an explosive gas as a fluid and never use this product in the presence of such gases.
   Please contact us when fluids other than compressed air are used.

4. This product is not explosion-protected.
   Never use this product in locations where the explosion of dust is likely to occur or flammable or explosive gases are used.

⚠️ Caution

1. This product is not washed. When bringing into a clean room, flush for several minutes and confirm the required cleanliness before using.

ного Warning

1. Reserve an enough space for maintenance, piping and wiring
   Please take into consideration that the one-touch fittings for supplying air, need enough space for the air tubing to be easily attached/detached.
   To avoid excessive stress on the connector and one-touch fitting, please take into consideration the air tubing's minimum bending radius and avoid bending at acute angles.
   Wiring with excessive twisting, bending, etc. can cause a malfunction, wire breakage, fire or air leakage.

   Minimum bending radius: Power supply cable.........35 mm
   (Note: Shown above is wiring with the fixed minimum allowable bending radius and at a temperature of 20 °C. If used under this temperature, the connector can receive excessive stress even though the minimum bending radius is allowable.)
   Regarding the minimum bending radius of the air tubing, refer to the instruction manual or catalog for tubing.

2. If the ionizer is to be mounted directly, mount it on a flat face.
   If the mounting face is curved, distorted and/or uneven, excessive force will be applied to the ionizer, which may cause damage and failure of the ionizer. Also, dropping or exposing the ioniser to other strong impact may cause failure or accident.

⚠️ Warning

3. Do not use this product in an area where noise (electric magnetic field or surge voltage, etc.) are generated.
   Using the ionizer under such conditions may cause it to malfunction or internal devices to deteriorate or break down. Take noise countermeasures and prevent the lines from mixing or coming into contact with each other.

4. Observe the tightening torque requirements when installing the ionizer. Refer to the following table for tightening torques for screws, etc.
   If overtightened with a high torque, the mounting screws or mounting brackets may break. Also, if under tightened with a low torque, the connection may loosen.

<table>
<thead>
<tr>
<th>Thread size</th>
<th>Recommended tightening torque</th>

5. Do not allow foreign matter or tools to enter the nozzle.
   The inside of the nozzle contains electrode needles. If a metal tool makes contact with the electrode needles, it can cause electric shock, resulting in a sudden movement by the operator that can cause further injuries such as hitting the body on peripheral equipment. Also, if the tool damages the electrode needle, the ionizer may fail or cause an accident.

⚠️ Danger High Voltage!

Electrode needles are under high voltage. Never touch them as there is a danger of electric shock or injury due to an evasive action against a momentary electrical shock caused by inserting foreign matter in the electrode cartridge or touching the electrode needle.

6. Do not apply moment to the nozzle.
   If a copper long nozzle is mounted horizontally, moment will be applied to the nozzle. Then if vibration occurs, the nozzle can be damaged. If a moment of 0.05 N-m or more will be applied, mount a support to the middle part of the nozzle so that the moment is not applied to the nozzle.

7. Do not affix any tape or seals to the main unit.
   If the tape or seal contains any conductive adhesive or reflective paint, a dielectric phenomenon may occur due to ions arising from such substances, resulting in electrostatic charging or electric leakage.

8. Installation and adjustment should be conducted after turning off the power supply.
Specific Product Precautions 2

Be sure to read this before handling.

**Wiring / Piping**

**Warning**

1. Before wiring confirm if the power supply voltage is enough and that it is within the specifications before wiring.
2. Always use a UL listed Class 2 output 24 VDC power supply.
3. Be sure to provide Class D grounding in order to maintain product performance.
   If such grounding is not provided, not only may static electricity removal capability be disrupted but electric shocks may also result and the ionizer or power supply may break down.
4. Be sure to turn off the power supply before wiring (including attachment/detachment of the connector).
5. When applying the power supply, pay special attention to the wiring and/or surrounding environment until the safety is confirmed.
6. Do not connect or remove any connectors including the power supply, while power is being supplied. Otherwise, the ionizer may malfunction.
7. If the power line and high pressure line are routed together, this product may malfunction due to noise. Therefore, use a separate wiring route for this product.
8. Be sure to confirm there are no wiring errors before starting this product.
   Incorrect wiring will lead to damage or malfunction to the product.
9. Flush the piping before using.
   Before using this product, exercise caution to prevent particles, water drop, or oil from entering the piping.

**Operating Environment / Storage Environment**

**Warning**

1. Do not use this product in an enclosed space.
   This product utilizes a corona discharge phenomenon. Do not use the product in an enclosed space as ozone and nitrogen oxides exist in such spaces, even though in marginal quantities.
   Also, ozone condensation can increase if used in an enclosed space, which can affect the human body, so ventilation is necessary. Even if ventilation is secured, the use of two more ionizers in a narrow space can increase ozone condensation. Therefore, check that ozone condensation is not more than a standard value of 0.1 ppm in the operating environment while the ionizer is in operation.
2. Take preventative measures against ozone.
   Equipment used around the ionizer should have ozone-prevention measures.
   Also, regularly check that there is no deterioration due to ozone.
3. The ionizer cannot be used without air purge.
   Without air purge, not only will the ionizer be unable to eliminate charge, but also the internal ozone condensation will increase and adversely affect the ionizer and peripheral equipment. Therefore, be sure to perform air purge when energizing the ionizer.
4. Observe the fluid and ambient temperature range.
   Fluid and ambient temperature ranges are 0 to 55°C for the ionizer. Do not use the ionizer in locations subject to sudden temperature changes even if the ambient temperature range is within the specified limits, as condensation may result.
5. Environments to avoid
   Avoid using and storing this product in the following environments since they may cause damage to this product.
   a) Avoid using in a place that exceeds an ambient temperature range of 0 to 55°C.
   b) Avoid using in a place that exceeds an ambient humidity range of 35 to 65% Rh.
   c) Avoid using in a place where condensation occurs due to a drastic temperature change.
   d) Avoid using in a place in the presence of corrosive or explosive gas or where there is a volatile combustible.
   e) Avoid using in an atmosphere where there are particles, conductive iron powders, oil, mist, salt, solvent, blown dust, cutting oil (water, liquid), etc.
   f) Avoid using in a place where ventilated air from an air conditioner is directly applied to the product.
   g) Avoid using in a closed place without ventilation.
   h) Avoid using in direct sunlight or radiated heat.
   i) Avoid using in a place where there is a strong magnetic noise (strong electric field, strong magnetic field, or surge).
   j) Avoid using in a place where static electricity is discharged to the main body.
   k) Avoid using in a place where a strong high frequency occurs.
   l) Avoid using in a place where this product is likely to be damaged by lightning.
   m) Avoid using in a place where direct vibration or shock is applied to the main body.
   n) Avoid using in a place where there is a force large enough to deform this product or weight is applied to the product.
6. Do not use an air containing mist or dust.
   The air containing mist or dust will cause the performance to decrease and shorten the maintenance cycle.
   Supply clean compressed air by using an air dryer (IDF series), air filter (AF/AFF series), and mist separator (AFM/AM series)
7. The ionizer is not designed to withstand lightning.
Series IZN10
Specific Product Precautions 3

Be sure to read this before handling.

## Maintenance

### Warning

1. Periodically (for example, every two weeks) inspect the ionizer and clean the electrode needles.
   
   Conduct a regular maintenance to see if the product is run having a disorder.
   
   Maintenance should be conducted by a fully knowledgeable and experienced person about the equipment. Using for long periods of time will lower the static electricity eliminating performance, if particles attach to the electrode pin. When the maintenance signal LED lights up, clean the electrode needle. Replace the electrode cartridge, if the pins are worn and the static electricity eliminating performance does not return even after being cleaned.

### Danger High Voltage!

This product contains a high voltage generation circuit. When performing maintenance inspection, be sure to confirm that the power supply to the ionizer is turned off. Never disassemble or modify the ionizer, as this may not only impair the product’s functionality but could cause an electric shock or electric leakage.

2. The tube and fitting must be treated as consumable parts.
   
   The tube and fitting that are connected to the female piping ports of the ionizer can deteriorate due to ozone and need to be replaced regularly or use an ozone-resistant type.

3. When cleaning the electrode pin or replacing the electrode cartridge, be sure to turn off the power supply to the main body.
   
   Touching an electrode needle when it is electrified may result in electric shock or other accidents.

4. Do not disassemble or modify this product.
   
   Otherwise, an electrical shock, damage and/or a fire may occur. Also, the disassembled or modified products may not achieve the performances guaranteed in the specifications, and exercise caution because the product will not be warranted.

5. Do not operate this product with wet hands.
   
   Otherwise, an electrical shock or accident may occur.

## Handling

### Warning

1. Do not drop, bump or apply excessive impact (10 G or more) while handling.
   
   Even though it does not appear to be damaged, the internal parts may be damaged and cause a malfunction.

2. When mounting/dismounting the cable, use your finger to pinch the claw of the modular plug, then attach/detach it correctly. Otherwise, modular plug mounting section may be damaged and cause a disorder.
Related Products

**Ionizer Series IZS31**

- Static electricity elimination time **0.3 seconds**
  
  The speed of static electricity elimination has been increased by optimization of a feedback sensor and shape of a nozzle.
  
  Conditions / Static buildup decreased from 1000 V to 100 V
  
  Discharged object: Charged plate monitor (150 mm x 150 mm, capacitance 20 pF)
  
  Installation distance: 200 mm (Tungsten electrode with air purge)

---

**Electrostatic Sensor Series IZD10 / Electrostatic Sensor Monitor Series IZE11**

**Electrostatic Sensor Series IZD10**

The importance of the static electric control is put on confirming the “actual status”.

- Potential measurement: ± 20 kV (detected at a 50 mm distance) ± 0.4 kV (detected at a 25 mm distance)
  
- Detects the electrostatic potential and outputs in an analog voltage
  
  • Output voltage: 1 to 5 V (Output impedance: Approx. 100 Ω)
  
- Possible to measure electrostatic potential

**Electrostatic Sensor Monitor Series IZE11**

- Output: Switch output x 2 + Analog output (1 to 5 V, 4 to 20 mA)
  
- Minimum unit setting: 0.001 kV (at ±0.4 kV), 0.1 kV (at ±20 kV)
  
- Display accuracy: ±0.5% F.S. ±1 digit or less
  
- Detection distance correction function (adjustable in 1 mm increments)
  
- Range switching supports two sensors. (±0.4 kV, ±20 kV)

---

**Handheld Electrostatic Meter Series IZH10**

The importance of the static electric control is put on confirming the “actual status”.

**Easy-to-use handheld electrostatic meter**

- Measuring range: ±20.0 kV
  
- Minimum display unit: 0.1 kV (±1.0 to ±20.0 kV) 0.01 kV (0 to ±0.99 kV)

- Compact & Lightweight: 85 g (excluding dry cell batteries)
  
- Backlight for reading in the dark
  
- LOW battery indicator
  
- Peak/Bottom display function
  
- Zero-out function
  
- Auto power-off function
SMC can provide all the equipment required to supply air to the ionizer. Consider the equipment below not only for providing an “opportunity to decrease maintenance” and “preventing damage” but also for an “energy-saving countermeasure”.

**Recommended pneumatic circuit diagram**

1. **Air Dryer / Series IDF**
   - Decreases the dew point of compressed air.
   - Limits moisture generation which can lead to damage.

2. **Air Filter / Series AF**
   - Eliminates solid foreign matters such as powder particles in the compressed air.

3. **Mist Separator / Series AFM**
   - Eliminates oil mist which is difficult to eliminate with an air filter.

4. **Digital Flow Switch / Series PF2A**
   - Decreases the air consumption by flow control.

5. **2-Color Display Digital Flow Switch / Series PFM**
   - Decreases the air consumption by setting to an appropriate pressure.

6. **Digital Pressure Switch / Series ISE30**
   - The pressure control prevents the ability of static electricity removal from being reduced in accordance with the reduction of air pressure.

7. **2 Port Solenoid Valve / Series VX**
   - Regulates to the appropriate air volume depending upon the installation condition.
   - Decreases the air consumption.

8. ** Restrictor / Series AS-X214**
   - Regulates to the appropriate air volume.

9. **Clean Air Filter / Series SFD**
   - Built-in capillary element
   - Nominal filtration rating: 0.01 µm
   - Adopted hollow fiber elements with over 99.99% filtering efficiency do not contaminate workpieces.
