Offset voltage  
(Ion balance) 
: ±5 V

Extensive rapid static neutralization

* When neutralizing static electricity from 1000 V to 100 V at a distance of 300 mm from the workpiece (front surface). When air flow of IZF31 is maximum.
Extensive static neutralization

For the IZF21. For details about the IZF31, refer to page 8. Refer to page 4 for flow rate adjustment and the description below for angle adjustment of the adjustable louver.

Extensive static neutralization area can be covered with adjustable louver. Option

- Angle adjustment trimmer for adjustable louver
- Adjustable in 5-stages from wide to narrow angle
- 90-degree rotation mounting available (Adjustable in a vertical direction)

Application Examples

- Extensive static neutralization at close range
- Long range static neutralization
Rapid static neutralization

Installation distance and discharge time (Discharge time from 1000 V to 100 V)

Stable Static Neutralization Performance, Easier Maintenance

The emitters life is almost doubled with averaging function.

Built-in sensor constantly monitors offset voltage.

Automatic balance adjustment function achieves stable offset voltage and reduces adjustment time.

Averaging Function
The life of the emitters is almost doubled by switching the polarity of the applied high voltage every time the power is supplied hence averaging the wear level of the emitters.

* Compared with the IZF10.

Prevents reduction of offset voltage performance due to emitters contamination when the ionizer is used for a long period of time.

Corrects offset voltage displacement due to the installation environment.

Constantly monitors offset voltage by use of a sensor. Prevents reduction of offset voltage performance due to emitters contamination when the ionizer is used for a long period of time. Balance adjustment trimmer can provide offset voltage adjustment suitable for the installation environment.
Emitter contamination can be reduced by automatic cleaning function.

Cleaning arms are installed inside. Emitter cleaning is started by external input or operation button.

Contamination of the emitters can be detected.

Emitter contamination level is constantly monitored. When maintenance is required, the user is alerted by a signal output and the LED turning ON.

Emitter cartridge is easily replaceable. (No tools are required.)

Emitter cartridge retaining screw M3 x 12 1 pc. (Provided by customer)
Flow Rate Adjustment Function

Flow rate is adjustable in 10 steps using the flow rate adjustment dial. The flow rate adjustment dial is removable to prevent unexpected changes of adjustment.

</tbody>
</table>

7 types of alarms are provided.

1. Power supply failure
2. Incorrect high voltage
3. Fan motor failure
4. CPU failure
5. Maintenance warning
6. Emitter cartridge mounting failure
7. Automatic cleaning failure

LED indicator can be checked from 2 directions!

Prevents ingress of lint and foreign matter to the motor and possibility of short-circuit between emitters!

Application Examples

Static neutralization on a conveyor
Static neutralization in a narrow space
- Neutralizing static electricity on PET bottles
  Trip-resistance during conveying/Prevents adhesion of dust.
- Neutralizing static electricity from films
  Prevents winding failure./Prevents adhesion of dust.

Neutralizing static electricity on molded goods
Improves detachability of molded goods from a die.
- Neutralizing static electricity on film molded goods
  Sticking and scattering prevention on a conveyor

Neutralizing static electricity from packing films
Prevents the filled substance from adhering to the packing film and reduces packing mistakes.
- Neutralizing static electricity from parts feeder
  Prevents clogging.

Neutralizing static electricity on packaging materials made from polystyrene foam.
Darkening due to dust adhesion prevented
- Neutralizing static electricity on an electric substrate
  Prevents element disruption due to discharge, and adhesion of dust.

Compact fan type with simple functions
Series IZF10
Compact design (H x W x D): 80 mm x 110 mm x 39 mm
Weight: 280 g
2 types of fans available
- Rapid static neutralizing fan: Discharge time (Static neutralization time)*
  1.5 s (When neutralizing static electricity from 1000 V to 100 V at a distance of 300 mm from the workpiece (front surface))
- Low-noise fan: 48 dB(A) (Measured at a distance of 300 mm from the workpiece),
  Rapid static neutralizing fan: 57 dB(A)
Offset voltage (Ion balance)*: ±13 V
With alarm
Incorrect high voltage, Emitter dirt detection

* Based on ANSI/ESD-STM3.1-2006 standards

</tbody>
</table>

**Notes:**

- **Note 1:** Incorrect high voltage, fan motor failure, and maintenance warning can also be released by the ionizer stop signal after resolving the error.
- **Note 2:** Fan rotation stops gradually because of its rotational inertia.
- **Note 3:** Ensure the power supply is turned off before clearing errors or cleaning emitters. If an alarm continues to be generated even after cleaning, the emitters may be worn out or damaged. If wear or damage to the emitters is detected, replace the emitter cartridge with a new one.
- **Note 4:** When excess current flows to the error signal or maintenance signal, the signal will be turned OFF to protect the output circuit.
- **Note 5:** The cleaning time is approximately 2 seconds.

IZF10-CG2
(without AC cord)
**Specific Product Precautions 1**

Be sure to read this before handling. Refer to the back cover for Safety Instructions.

### Warning

1. This product is intended to be used with general factory automation (FA) equipment.
   If considering using the product for other applications (especially those stipulated on Safety Instructions), please consult SMC beforehand.

2. Use this product within the specified voltage and temperature range.
   Using outside of the specified voltage can cause a malfunction, damage, electrical shock, or fire.

3. This product is not explosion-protected.
   Never use this product in locations where the explosion of dust is likely to occur or flammable or explosive gases are used. This can cause a fire.

### Caution

1. Clean specification is not available with this product.

### Warning

1. Reserve an enough space for maintenance and wiring.
   Install the product in consideration of the connector connection part and the emitter cartridge mounting part so that there is enough space for emitter maintenance, inspection and wiring. To avoid unreasonable stress applied to the connector mounting parts, bending of the cable should be more than the minimum bending radius. If the cable is bent in an acute angle or load is applied to the cable successively, it may cause a malfunction, broken wire or fire.

2. Mount this product on a plane surface.
   Mounting on an uneven surface will apply excess force to the frame or case, which leads to damage or failure. Do not drop the product or subject it to a strong impact. This may cause an injury or accident.

3. Avoid using in a place where noise (electromagnetic wave and surge) is generated.
   If the product is used in an environment where noise is generated, it may lead to deterioration or damage of the internal elements. Take measures to prevent noise at its source and avoid power and signal lines from coming into close contact.

4. Use a correct tightening torque.
   If the screws are tightened in excessive of the specified torque range, it may damage the mounting screws, mounting brackets, etc. If the tightening torque is insufficient, the mounting screws and brackets may become loose.

5. Do not adhere tape or sticker onto the product body.
   If the tape or sticker contains conductive adhesive or reflective paint, it is possible that due to the dielectric effect, charge could build up causing an electro-static discharge or electrical leakage.

6. Be sure to cut off the power supply before installing and adjusting the product.

### Caution

1. Secure enough space on the rear side of the ionizer so that the air suction is performed with a fan.
   This product ventilates with an fan motor. If there are obstacles such as wall on the rear side (air suction side) of the ionizer, the ventilation will be obstructed, decreasing the static neutralization performance. Install the ionizer so that its rear surface is at least 20 mm (for IZF21) or 30 mm (for IZF31) away from the obstacles.

2. Be sure to check the effect of static neutralization after installation.
   The effect of the static neutralization varies depending on the surrounding installation and operating conditions. Check the effect of the static neutralization after installation.

3. When installing ionizers which operate in DC mode (one polarity, positive or negative) close together, they should be positioned at least 2 m away from each other.
   When an ionizer is used close to the ionizer which operates in DC mode, separate them by at least 2 m. The offset voltage (ion balance) may not be adjusted by the built-in sensor due to the ions discharged from the ionizer which operates in DC mode.

4. Do not apply an excessive external force to the finger guard on the air suction side.
   If an excessive external force is applied to the finger guard (including the filter holder) on the air suction side, it may be broken. Do not apply an external force of 50 N or more to the finger guard.

### Wiring

1. Before wiring, ensure that the power supply capacity is larger than the specification and that the voltage is within the specification.

2. To maintain product performance, the power supply shall be UL listed Class 2 certified by National Electric Code (NEC) or evaluated as a limited power source provided by UL60950.

3. To maintain the product performance, ground the product with an earth ground cable with a resistance of 100 Ω or less according to this catalog.

4. Be sure to turn off the power supply before wiring (including attachment/detachment of the connector).

5. When applying the power supply, pay special attention to the wiring and/or surrounding environment until the safety is confirmed.

6. Do not connect or remove any connectors including the power supply, while power is being supplied. Otherwise, the ionizer may malfunction.

7. If the power line and high-pressure line are routed together, this product may malfunction due to noise. Therefore, use a separate wiring route for this product.

8. Be sure to confirm that there are no wiring errors before starting this product. Faulty wiring will lead to product damage or malfunction.
Operating Environment/Storage Environment

**Warning**

1. **Keep within the specified ambient temperature range.**
   The specified ambient temperature range for ionizer is 32 to 122°F (0 to 50°C), and for AC adapter is 32 to 104°F (0 to 40°C). Avoid sudden temperature changes even within specified ambient temperature range, as it may cause condensation.

2. **Do not use this product in an enclosed space.**
   This product utilizes a corona discharge phenomenon. Do not use the product in an enclosed space as ozone and nitrogen oxides exist in such places, even though in marginal quantities.

3. **Environments to avoid**
   Never use or store under the following conditions. These may cause a failure, fire, etc.
   a. Areas where ambient temperature exceeds the operating temperature range.
   b. Areas where ambient humidity exceeds the operating humidity range.
   c. Areas where abrupt temperature changes may cause condensation.
   d. Areas where corrosive gas, flammable gas or other volatile flammable substances are stored.
   e. Areas where the product may be exposed to conductive powder such as iron powder or dust, oil mist, salt, organic solvent, machining chips, particles or cutting oil (including water and any liquids), etc.
   f. Paths of direct air flow, such as air conditioners.
   g. Enclosed or poorly ventilated areas.
   h. Locations that are exposed to direct sunlight or heat radiation.
   i. Areas where strong electromagnetic noise is generated, such as strong electrical and magnetic fields or supply voltage spikes.
   j. Areas where the product is exposed to static electricity discharge.
   k. Locations where strong high frequency is generated.
   l. Locations that are subject to potential lightning strikes.
   m. In an area where the product may receive direct impact or vibration.
   n. Areas where the product may be subjected to forces or weight that could cause physical deformation.

Maintenance

**Warning**

1. **Perform maintenance regularly and clean the emitters.**
   It is recommended to perform maintenance every week or when the maintenance (NDL) LED turns ON.
   Check regularly if the product is operating with undetected failures or not. The maintenance must be performed by an operator who has sufficient knowledge and experience. If the product is used for an extended period of time with dust present on the emitters, the product’s ability to neutralize static electricity will be reduced.
   If the emitter becomes worn and the product’s ability to neutralize static electricity is not restored after cleaning, replace the emitter cartridge.

2. **Cleaning or replacing the emitters should never be performed while the power is supplied to the product.**
   Fan rotates due to inertial force even when power supply is stopped. Confirm that the fan does not move before performing cleaning or replacing the emitters.
   Never perform cleaning or replacing the emitters when the product is energized. The fan rotation may cause injury.
   If the emitter is touched while the product is energized, it may cause an electric shock or accident.

3. **Do not disassemble or modify the product.**
   Disassembling or modifying the product may cause accidents such as electric shock, failure or fire. The product will not be guaranteed if it is disassembled and/or modified.

4. **Do not operate the product with wet hands.**
   Never operate the product with wet hands. It may cause electric shock or other accidents.

**Danger High Voltage**

This product contains a high-voltage generation circuit. When performing maintenance inspection, be sure to confirm that the power supply to the ionizer is turned off. Never disassemble or modify the ionizer, as this may not only impair the product’s functionality but could cause an electric shock or electric leakage.

**Caution**

1. **Do not drop, hit or apply excessive shock (100 m/s² or more) to the product when handling it.**
   Even if the ionizer body is not damaged, the internal components may be damaged, leading to a malfunction.
## Safety Instructions

These safety instructions are intended to prevent hazardous situations and/or equipment damage. These instructions indicate the level of potential hazard with the labels of “Caution,” “Warning” or “Danger.” They are all important notes for safety and must be followed in addition to International Standards (ISO/IEC)+1, and other safety regulations.

### Caution:
- **Caution** indicates a hazard with a low level of risk which, if not avoided, could result in minor or moderate injury.

### Warning:
- **Warning** indicates a hazard with a medium level of risk which, if not avoided, could result in death or serious injury.

### Danger:
- **Danger** indicates a hazard with a high level of risk which, if not avoided, will result in death or serious injury.

---

### Warning

1. **1. The compatibility of the product is the responsibility of the person who designs the equipment or decides its specifications.**

   Since the product specified here is used under various operating conditions, its compatibility with specific equipment must be decided by the person who designs the equipment or decides its specifications based on necessary analysis and test results. The expected performance and safety assurance of the equipment will be the responsibility of the person who has determined its compatibility with the product. This person should also continuously review all specifications of the product referring to its latest catalog information, with a view to giving due consideration to any possibility of equipment failure when configuring the equipment.

2. **2. Only personnel with appropriate training should operate machinery and equipment.**

   The product specified here may become unsafe if handled incorrectly. The assembly, operation and maintenance of machines or equipment including our products must be performed by an operator who is appropriately trained and experienced.

3. **3. Do not service or attempt to remove product and machinery/equipment until safety is confirmed.**

   1. The inspection and maintenance of machinery/equipment should only be performed after measures to prevent failing or runaway of the driven objects have been confirmed.
   2. When the product is to be removed, confirm that the safety measures as mentioned above are implemented and the power from any appropriate source is cut, and read and understand the specific product precautions of all relevant products carefully.
   3. Before machinery/equipment is restarted, take measures to prevent unexpected operation and malfunction.

4. **4. Contact SMC beforehand and take special consideration of safety measures if the product is to be used in any of the following conditions.**

   1. Conditions and environments outside of the given specifications, or use outdoors or in a place exposed to direct sunlight.
   2. Installation on equipment in conjunction with atomic energy, railways, air navigation, space, shipping, vehicles, military, medical treatment, combustion and recreation, or equipment in contact with food and beverages, emergency stop circuits, clutch and brake circuits in press applications, safety equipment or other applications unsuitable for the standard specifications described in the product catalog.
   3. An application which could have negative effects on people, property, or animals requiring special safety analysis.
   4. Use in an interlock circuit, which requires the provision of double interlock for possible failure by using a mechanical protective function, and periodical checks to confirm proper operation.

---

### Limited warranty and Disclaimer/Compliance Requirements

The product used is subject to the following “Limited warranty and Disclaimer” and “Compliance Requirements”.

#### Limited warranty and Disclaimer

1. **1. The product is provided for use in manufacturing industries.**

   The product herein described is basically provided for peaceful use in manufacturing industries.

   If considering the use of the product in other industries, consult SMC beforehand and exchange specifications or a contract if necessary.

   If anything is unclear, contact your nearest sales branch.

#### Compliance Requirements

1. **1. The warranty period of the product is 1 year in service or 1.5 years after the product is delivered, whichever is first.**

   Also, the product may have specified durability, running distance or replacement parts. Please consult your nearest sales branch.

2. **2. For any failure or damage reported within the warranty period which is clearly our responsibility, a replacement product or necessary parts will be provided. This limited warranty applies only to our product independently, and not to any other damage incurred due to the failure of the product.**

3. **3. Prior to using SMC products, please read and understand the warranty terms and disclaimers noted in the specified catalog for the particular products.**

   - 1) ISO 4414: Pneumatic fluid power – General rules relating to systems.
   - 2) Vacuum pads are excluded from this 1 year warranty. A vacuum pad is a consumable part, so it is warranted for a year after it is delivered. Also, even within the warranty period, the wear of a product due to the use of the vacuum pad or failure due to the deterioration of rubber material are not covered by the limited warranty.

---
