Booster Regulator/Air Tank

Increase factory air pressure by up to 4 times!
Air-only operation requires no power supply, reduces heat generation, and allows easy installation.

- **NEW**
  - Renewed model with pressure increase ratio 2 to 4 times (VBA11A)

- **No power supply or wiring needed**
  - There is no need to install dedicated electrical wiring.

- **Low heat generation**
  - Very little heat is generated because no electricity is used, and there is no impact on cylinders, solenoid valves, etc.

- **Easy installation**
  - Simply insert the unit in the air line. Requires far less space than installing the compressor.

- **Air-only operation**
  - Operation is safe because no electricity is used.

Series **VBA/VBAT**

- Booster Regulator/Series VBA
- Air Tank/Series VBAT

**New** RoHS

Increase factory air pressure by up to 4 times! Air-only operation requires no power supply, reduces heat generation, and allows easy installation.

![Diagram of Booster Regulator/Air Tank](image)

CAT.NAS11-96D
Improved service life

- Floating piston structure (PAT. PEND)
- Grease retaining groove
  * Except VBA10A, 11A

Improved reliability

Built-in mesh filter at IN port
- Prevents operation failure due to foreign matter.

Anti-condensation

Integrated air-feeding tube with the main tube
- Mitigates condensation caused by cooling during exhaust expansion.

Features 1

- More compact installation can be achieved.
  - Except VBA22A, 42A

- NEW
  - Elbow silencer added* (Option)
  - 1/8" gauge ports
    - Allows use of standard fittings for remote pressure monitoring, etc.
    * Gauge ports changed from 1/16" to 1/8" (VBA1A, 2A)

- Air-operated type
  - VBA22A
  - VBA42A

- Max. operating pressure 1.6 MPa (232 psi)
  - VBA43A

- Fourfold pressure increase type
  - NEW
  - VBA11A

Reduced noise

- Reduced by 13 dB (A) compared with the conventional model
- Metal noise reduced by a bumper on the impact part of the switch valve
- Exhaust noise reduced by a high-noise reduction silencer

NEW

- Grease retaining groove
  * Except VBA10A, 11A

- Floating structure (PAT. PEND)
- Mesh filter

- Anti-condensation
  - Mitigates condensation caused by cooling during exhaust expansion.

- Built-in mesh filter at IN port
- Prevents operation failure due to foreign matter.

- NEW
  - Elbow silencer added* (Option)

- 1/8" gauge ports
  - Allows use of standard fittings for remote pressure monitoring, etc.
  * Gauge ports changed from 1/16" to 1/8" (VBA1A, 2A)

### Mist Separator, Exhaust Cleaner

<table>
<thead>
<tr>
<th>Description</th>
<th>Model</th>
</tr>
</thead>
<tbody>
<tr>
<td>Mist separator</td>
<td>AMC310-03, AMC310-06</td>
</tr>
<tr>
<td>Exhaust cleaner</td>
<td>AMC310-03, AMC310-06</td>
</tr>
</tbody>
</table>

Note) Refer to page 12 for air tanks, Best Pneumatics No. 5 for mist separators and Best Pneumatics No. 6 for exhaust cleaners.

Refer to the separate operation manual for the connection method.

### Design

1. **System configuration**
   - The IN port of the booster regulator has metallic mesh to prevent dust from entering the booster regulator. However, it cannot remove dust continuously or separate drainage. Make sure to install a mist separator (AM series) on the inlet side of the booster regulator.
   - The booster regulator has a sliding part inside, and it generates dust. Also, install an air purification device such as an air filter or a mist separator on the outlet side as necessary.
   - Connect a lubricator to the outlet side, because the accumulated oil in the booster regulator may result in a malfunction.

2. **Exhaust air measures**
   - Provide a dedicated pipe to release the exhaust air from each booster regulator. If exhaust air is converged into a pipe, the back pressure that is created could cause improper operation.
   - Depending on the necessity, install a silencer or an exhaust cleaner on the exhaust port of the booster regulator to reduce the exhaust noise.

3. **Maintenance space**
   - Allow the sufficient space for maintenance and inspection.
**Charge Characteristics**

**VBA10A**

- The time required to charge tank pressure from 0.7 MPa to 0.95 MPa at 0.5 MPa supply pressure:

\[
\frac{P_2}{P_1} = \frac{0.7}{0.5} = 1.4, \quad \frac{P_2}{P_1} = \frac{0.95}{0.5} = 1.9
\]

With the pressure increase ratio from 1.4 to 1.9, the charge time of 23 – 6 = 17 sec. (t) is given by the graph. Then, the charge time (T) for a 10 L tank:

\[
T = t \times \frac{V}{10} = 17 \times \frac{10}{10} = 17 \text{ (s)}.
\]

**VBA20A, 22A**

- The time required to charge tank pressure from 0.8 MPa to 1.0 MPa at 0.5 MPa supply pressure:

\[
\frac{P_2}{P_1} = \frac{0.8}{0.5} = 1.6, \quad \frac{P_2}{P_1} = \frac{1.0}{0.5} = 2.0
\]

With the pressure increase ratio from 1.6 to 2.0, the charge time of 11.5 – 3.8 = 7.7 sec. (t) is given by the graph. Then, the charge time (T) for a 100 L tank:

\[
T = t \times \frac{V}{10} = 7.7 \times \frac{100}{10} = 77 \text{ (s)}.
\]

**VBA40A, 42A**

- The time required to charge tank pressure from 0.8 MPa to 1.0 MPa at 0.5 MPa supply pressure:

\[
\frac{P_2}{P_1} = \frac{0.8}{0.5} = 1.6, \quad \frac{P_2}{P_1} = \frac{1.0}{0.5} = 2.0
\]

With the pressure increase ratio from 1.6 to 2.0, the charge time of 3.5 – 1.1 = 2.4 sec. (t) is given by the graph. Then, the charge time (T) for a 100 L tank:

\[
T = t \times \frac{V}{10} = 2.4 \times \frac{100}{10} = 24 \text{ (s)}.
\]
### VBA43A

**Flow-rate Characteristics**

**Outlet pressure (MPa)**

<table>
<thead>
<tr>

<td>25</td>
<td>10</td>
<td>2.6 gal.</td>
<td></td>
</tr>
</tbody>
</table>

**Pressure Characteristics**

- Inlet pressure: 0.7 MPa (116 psi)
- Outlet pressure: 2.0 MPa (290 psi)
- Flow rate: 20 L/min (ANR)

**Charge Characteristics**

- The time required to charge tank pressure from 0.8 MPa to 1.0 MPa at 0.5 MPa supply pressure:

\[
\frac{P_2}{P_1} = 0.8, \quad \frac{P_2}{P_1} = 1.0, \quad \frac{P_2}{P_1} = 1.5
\]

With the pressure increase ratio from 1.6 to 2.0, the charge time of 4.5 – 13.2 sec. (t) is given by the graph. Then, the charge time (T) for a 10 L tank:

\[
T = t \times \frac{V}{10} = 3.2 \times \frac{100}{10} = 32 \text{ (s)}.
\]

### VBA11A

**Flow-rate Characteristics**

**Outlet pressure (MPa)**

<table>
<thead>
<tr>
<th>Outlet air flow (SCFM)</th>
<th>0.10</th>
<th>0.20</th>
<th>0.30</th>
<th>0.40</th>
<th>0.50</th>

</tr>
</tbody>
</table>

**Pressure Characteristics**

- Inlet pressure: 0.5 MPa (72.5 psi)
- Outlet pressure: 1.0 MPa (145 psi)
- Flow rate: 20 L/min (ANR)

**Charge Characteristics**

- The time required to charge pressure in the tank from 1.0 MPa to 1.5 MPa at 0.5 MPa supply pressure:

\[
\frac{P_2}{P_1} = 1.0, \quad \frac{P_2}{P_1} = 1.5
\]

With the pressure increase ratio from 2.0 to 3.0, the charge time of 147 – 58 = 89 sec. (t) is given by the graph. Then, the charge time (T) for a 10 L tank:

\[
T = t \times \frac{V}{10} = 89 \times \frac{100}{10} = 89 \text{ (s)}.
\]

### Pulsation/Pulsation is decreased by using tank.

If the outlet capacity is undersized, pulsation may occur.

- Performance of air tank
  - Alleviates the pulsation generated on the outlet side.
  - Manages supply air to be consumed for short periods of time by storing air through raising the tank pressure.
Series VBA

Sizing (Sizing can be achieved with the SMC Pneumatic System Energy Saving Program Ver. 3.1) which can be downloaded from the SMC website: http://www.smcworld.com/

Start

Provide requisite conditions for selection.

Calculate required air flow rate Q.

Select booster regulator size from flow-rate characteristics table.

Judgement of flow rate

NO: Need no tank. The VBA4-1A can supply necessary pressure.

YES

The VBA2-1A cannot obtain necessary pressure.

Obtain the tank capacity V.

Select the tank capacity over V.

Calculate time T from charge characteristics table.

Judgement of charge time T ≤ Ts

When running continuously for longer periods of time, confirm the life expectancy. When the life expectancy is shorter than required, select a larger sized booster regulator.

END

Judgement of flow rate

NO

YES

The VBA2-1A cannot obtain necessary pressure.

Obtain the tank capacity V.

Select the tank capacity over V.

Calculate time T from charge characteristics table.

Judgement of charge time T ≤ Ts

When running continuously for longer periods of time, confirm the life expectancy. When the life expectancy is shorter than required, select a larger sized booster regulator.

END

Calculation

Q [L/min (ANR)] = \( \pi \times D^2 \times W \times (P_2 + 0.101) \times 60 \times C \) 4 x 10^4

Q = \( \pi \times 100^2 \times 200 \times (0.8 + 0.101) \times 60 \times 1 = 841 \) [L/min (ANR)]

Other conditions:

Q [L/min (ANR)]: Required air flow rate
Qb [L/min (ANR)]: Outlet air flow rate of booster regulator
P3 [MPa]: Necessary supply pressure to cylinder
P2 [MPa]: Tank charge pressure
T1 [s]: Time to charge (Time to charge to P2)
T2 [s]: Time to charge (Time to charge to P3)
T [s]: Time to charge (Time to charge from P2 to P3)
K: Cylinder double-acting: 2, single-acting: 1
Z: Number of booster regulators

Caution

• Use the VBA111A (pressure increase ratio 4) with pressure increase ratio 2 to 4. Usage of pressure increase ratio below 2 is preferred for the VBA10A (pressure increase ratio 2).

A stable operation and increased life expectancy will result.

• Inlet supply pressure volume is (approximately twice (pressure increase ratio 2), approx. 4 times (pressure increase ratio 4)) the volume of the outlet side. Booster regulator requires the inlet side volume which is the sum of the flow volume running into the outlet side and the volume exhausted from E port (for driving), because air is the power source.

Other calculations

V = \( (Q - Qb/2) \times (Tc\times K/60) \times (P_2 - P_2) \times 9.9 \)

V = \( (841 - 600/2) \times (0.5 \times 2/60) \times 9.9 \)

Select the tank from table below.

<table>
<thead>
<tr>
<th>Tank part no.</th>
<th>Inner volume</th>
<th>Applicable combination model</th>
</tr>
</thead>
<tbody>
<tr>
<td>VBAT05A1-X11</td>
<td>5 L (1.3 gal.)</td>
<td>VBA1-1A —</td>
</tr>
<tr>
<td>VBAT10A1-X11</td>
<td>10 L (2.6 gal.)</td>
<td>VBA1-1A VBA2-1A</td>
</tr>
</tbody>
</table>

Refer to “Flow-rate Characteristics” on pages 3 and 4.

Refer to “Charge Characteristics” on pages 3 and 4.

When running continuously for longer periods of time, confirm the life expectancy. When the life expectancy is shorter than required, select a larger sized booster regulator.

END
Working Principle

The IN air passes through the check valve to booster chambers A and B. Meanwhile, air is supplied to drive chamber B via the governor and the switching valve. Then, the air pressure from drive chamber B and booster chamber A are applied to the piston, boosting the air in booster chamber B. As the piston travels, the boosted air is pushed via the check valve to the OUT side. When the piston reaches to the end, the piston causes the switching valve to switch, so that drive chamber B is in the exhaust state and drive chamber A is in the supply state respectively. Then, the piston reverses its movement, this time, the pressures from booster chamber B and drive chamber A boosts the air in booster chamber A and sends it to the OUT side. The process described above is repeated to continuously supply highly pressurized air from the IN to the OUT side. The governor establishes the outlet pressure by handle operation and pressure adjustment in the drive chamber by feeding back the outlet pressure.

Circuit Example

- When only some of the machines in the plant require high-pressure air, booster regulators can be installed for only the equipment that requires it. This allows the overall system to use low-pressure air while accommodating machines requiring high-pressure air.
- When charging a tank or the like from a source at atmospheric pressure, a circuit with a check valve can be used to reduce the charge time by allowing air to pass through the check valve up to the inlet pressure.
- When the actuator output is insufficient but space limitations prohibit switching to a larger cylinder diameter, a booster regulator can be used to increase the pressure. This makes it possible to boost the output without replacing the actuator.
- When a certain level of output is required but the cylinder size must be kept small so that the driver remains compact.
- When only one side of the cylinder is used for work, booster regulators can be installed only on the lines that require them to reduce the overall air consumption volume.

Initially, inlet pressure (P1) passes through the check valve, fills P2, and results in P1 = P2.
**Design**

⚠️ **Warning**

1. **Warning concerning abnormal outlet pressure**
   - If there is a likelihood of causing an outlet pressure drop due to unforeseen circumstances such as equipment malfunction, thus leading to a major problem, take safety measures on the system side.
   - Because the outlet pressure could exceed its set range if there is a large fluctuation in the inlet pressure, leading to unexpected accidents, take safety measures against abnormal pressures.
   - Operate the equipment within its maximum operating pressure and set pressure range.

2. **Residual pressure measures**
   - Connect a 3-port valve to the OUT side of the booster regulator if the residual pressure must be released quickly from the outlet pressure side for maintenance, etc. (Refer to the diagram below.) The residual outlet pressure side cannot be released even if the 3-port valve is connected to the IN side because the check valve in the booster regulator will activate.

   ![Diagram](image1)

   - After operation is finished, release the supply pressure at the inlet. This stops the booster regulator from moving needlessly and prevents operating malfunctions.

   ![Diagram](image2)

**Selection**

⚠️ **Caution**

1. **Check the specifications.**
   - Consider the operating conditions and operate this product within the specification range that is described in this catalog.

2. **Selection**
   - Based on the conditions (such as pressure, flow rate, takt time) required for the outlet side of the booster regulator, select the size of the booster regulator in accordance with the selection procedures described in this catalog or model selection program.
   - Use the VBA11A (pressure increase ratio 4) with pressure increase ratio 2 to 4. Usage of pressure increase ratio below 2 is preferred for the VBA10A (pressure increase ratio 2). A stable operation and increased life expectancy will result.
   - Inlet supply pressure volume is {approximately twice (pressure increase ratio 2), approx. 4 times (pressure increase ratio 4)} the volume of the outlet side. Booster regulator requires the inlet side volume which is the sum of the flow volume running into the outlet side and the volume exhausted from E port (for driving), because air is the power source.
   - When running continuously for longer periods of time, confirm the life expectancy. The life expectancy of a booster regulator is dependent upon the operational cycle. Thus, when used for driving cylinders, etc. in the outlet side, life expectancy will be reduced.
   - Make sure the outlet pressure is set 0.1 MPa (15 psi) or higher than the inlet pressure. A pressure difference below 0.1 MPa (15 psi) makes the operation unstable and may result in a malfunction.

**Mounting**

⚠️ **Caution**

1. **Transporting**
   - When transporting this product, hold it lengthwise with both hands. Never hold it by the black handle that protrudes from the center because the handle could become detached from the body, causing the body to fall and leading to injury.

2. **Installation**
   - Install this product so that the silver-colored tie-rods and cover are placed horizontally. If mounted vertically, it may result in a malfunction.
   - Because the piston cycle vibration is transferred, use the following mounting bolts (VBA1: M5; VBA2, 4: M10) and tighten them with the specified torque (VBA1: 3 N·m (2.2 ft-lbf); VBA2, 4: 24 N·m (17.7 ft-lbf)).
   - If the transmission of vibration is not preferred, insert an isolating rubber material before installation.
   - Mount the pressure gauge with a torque of 7 to 9 N·m (5.2 to 6.6 ft-lbf).

**Piping**

⚠️ **Caution**

1. **Flushing**
   - Use an air blower to flush the piping to thoroughly remove any cutting chips, cutting oil, or debris from the piping inside, before connecting them. If they enter the inside of the booster regulator, they could cause the booster regulator to malfunction or its durability could be affected.

2. **Piping size**
   - To bring the booster regulator’s ability into full play, make sure to match the piping size to the port size.

**Air Supply**

⚠️ **Caution**

1. **Quality of air source**
   - Connect a mist separator to the inlet side near the booster regulator. If the quality of the compressed air is not thoroughly controlled, the booster regulator could malfunction (without being able to boost) or its durability could be affected.
   - If dry air (atmospheric pressure dew point: –17°C (2°F) or less) is used, the life expectancy may be shortened because dry air will accelerate evaporation of grease inside.

**Operating Environment**

⚠️ **Caution**

1. **Installation location**
   - Do not install this product in an area that is exposed to rainwater or direct sunlight.
   - Do not install in locations influenced by vibrations. If it must be used in such an area due to unavoidable circumstances, please contact SMC beforehand.
Handling

⚠️ Caution

1. Setting the pressure on the handle-operated type
   - If air is supplied to the product in the shipped state, the air will be released.
   - Set the pressure by quickly pulling up on the governor handle, releasing the lock, and rotating the handle in the direction of the arrow (+).
   - There is an upper and lower limit for the handle rotation. If over-rotating the handle even after reaching to the limit, the internal parts may be damaged. If the handle suddenly feels heavy while being turned, stop turning the handle.
   - Once the setting is completed, push the handle down and lock it.
   - To decrease the outlet pressure, after the pressure has been set, rotate the handle in the direction of the arrow (–). The residual air will be released from the area of the handle, due to the relief construction of the governor.
   - To reset the pressure, first reduce the pressure so that it is lower than the desired pressure; then, set it to the desired pressure.

2. Setting the pressure on the air-operated type (VBA22A, 42A)
   - Connect the outlet pipe of the pilot regulator for the remote control to the pilot port (P). (Refer to the diagram below.)
   - Refer to the graph below for the relationship between the pilot pressure and outlet pressure.
   - The AR20 and AW20 are recommended for the pilot regulator.

3. Draining
   - If this product is used with a large amount of drainage accumulated in the filter, mist separator or tank, the drainage could flow out, leading to equipment malfunction. Therefore, drain the system once a day. If it is equipped with an auto drain, check its operation once a day.

4. Exhaust
   - Exhausting time from E port may be longer for a booster regulator which is set to switch in longer hour intervals. This is not an abnormal phenomenon.

5. Maintenance
   - Life expectancy varies depending on the quality of air and the operating conditions. Signs that the unit is reaching the end of its service life include the following:
     - Constant bleed from under the handle.
     - Air exhaust noise can be heard from the booster regulator at 10 to 20 second intervals even when there is no air consumption on the outlet side.

   Conduct maintenance earlier than scheduled in such cases.
   - When maintenance is required, confirm the model and serial number of the booster regulator, and please contact SMC for maintenance kit.
   - Conduct maintenance according to the specified maintenance procedure by individuals possessing enough knowledge and experiences in maintaining pneumatic equipment.
   - The list of replacement parts and kit number are shown on page 9, and the figure shows the position of the parts.

For booster regulator with pressure gauge, please consult SMC.

* For booster regulator with pressure gauge, please consult SMC.

* This option cannot be selected for air tank with safety valve.
Air Tank
Series VBAT

How to Order

- Compact connections are possible with booster regulators.
- It can be used alone as a tank.
- Tanks that are less than 6” I.D. and are outside the scope of ASME Standards Section VIII Division 1.

Note 2) Information as of August 2006

Warning

1. Operating pressure
   - Operate this product at or below the maximum operating pressure. If it is necessary, take appropriate safety measures to ensure that the maximum operating pressure is not exceeded.
   - When the tank alone is used
     Use a pressure switch or a safety valve to make sure that the maximum operating pressure is not exceeded.

2. Connection
   - Connect a filter or a mist separator to the OUT side of the tank. Because the inner surface of the tank is untreated, there is a possibility of dust flowing out to the outlet side.
   - Using tank accessories, a VBA booster regulator can be connected directly in the combinations indicated below.

Selection

Caution

- Consider the operating conditions and operate this product within the specification range.
- When using the air tank with a booster valve, refer to “Sizing” on page 6 of SMC Pneumatic System Energy Saving Program.

Mounting

1. Accessories
   - See the operating manual regarding combining booster regulators with older model air tanks.
   - The accessories are secured by bands to the feet of the tank. Once removed, make sure not to lose them.

2. Installation
   - Tank should be installed away from people. It is dangerous if the accumulated air inside the tank were to seep out.
   - Do not mount the air tank on a moving part or a place with vibration.
   - When connecting a booster regulator with the tank, refer to the operating manual first, which is provided with the air tank before assembling.
   - Refer to the operating manual regarding mounting methods when using long bolts.
   - To mount the air tank on a floor surface, use the four holes to secure the tank with bolts or anchor bolts.

Maintenance

1. Inspection
   - The use of pressure vessels could lead to an unexpected accident due to external damage or internal corrosion caused by drainage. Therefore, make sure to check periodically for external damage, or the extent of internal corrosion through the port hole. An ultrasonic thickness indicator may also be used to check for any reduction in material thickness.

2. Draining
   - If this product is used with a large amount of drainage, the drainage could flow out, leading to equipment malfunction or corrosion inside the tank. Therefore, drain the system once a day.
**Dimensions**

**VBAT05A □ 1-X11** Material: Carbon steel

Connected to VBA10A, VBA11A

— The length may be longer than the specification if the plugs mounted on the tank are not fit to the end.

**VBAT10A □ 1-X11** Material: Carbon steel

Connected to VBA10A, VBA11A

— The length may be longer than the specification if the plugs mounted on the tank are not fit to the end.

Connected to VBA20A, VBA22A

Connected to VBA22A

— The length may be longer than the specification if the plugs mounted on the tank are not fit to the end.
**Safety Instructions**

These safety instructions are intended to prevent hazardous situations and/or equipment damage. These instructions indicate the level of potential hazard with the labels of “Caution,” “Warning” or “Danger.” They are all important notes for safety and must be followed in addition to International Standards (ISO/IEC), American National Standards Institute (ANSI)\(^1\) and other safety regulations.

### Caution:
- **Caution** indicates a hazard with a low level of risk which, if not avoided, could result in minor or moderate injury.

### Warning:
- **Warning** indicates a hazard with a medium level of risk which, if not avoided, could result in death or serious injury.

### Danger:
- **Danger** indicates a hazard with a high level of risk which, if not avoided, will result in death or serious injury.

---

**Warning**

1. **The compatibility of the product is the responsibility of the person who designs the equipment or decides its specifications.**
   
   Since the product specified here is used under various operating conditions, its compatibility with specific equipment must be decided by the person who designs the equipment or decides its specifications based on necessary analysis and test results. The expected performance and safety assurance of the equipment will be the responsibility of the person who has determined its compatibility with the product. This person should also continuously review all specifications of the product referring to its latest catalog information, with a view to giving due consideration to any possibility of equipment failure when configuring the equipment.

2. **Only personnel with appropriate training should operate machinery and equipment.**
   
   The product specified here may become unsafe if handled incorrectly. The assembly, operation and maintenance of machines or equipment including our machinery and equipment.

3. **Do not service or attempt to remove product and machinery/equipment until safety is confirmed.**
   
   The product herein described is basically provided for manufacturing industries. The use of SMC products with production equipment for the manufacture of weapons of mass destruction (WMD) or any other weapon is strictly prohibited. If anything is unclear, contact your nearest sales branch.

4. **Contact SMC beforehand and take special consideration of safety measures if the product is to be used in any of the following conditions.**
   
   1. Conditions and environments outside of the given specifications, or use outdoors or in a place exposed to direct sunlight.
   2. Installation on equipment in conjunction with atomic energy, railways, air navigation, space, shipping, vehicles, military, medical treatment, combustion and recreation, or equipment in contact with food and beverages, emergency stop circuits, clutch and brake circuits in press applications, safety equipment or other applications unsuitable for the standard specifications described in the product catalog.
   3. An application which could have negative effects on people, property, or animals requiring special safety analysis.
   4. Use in an interlock circuit, which requires the provision of double interlock for possible failure by using a mechanical protective function, and periodical checks to confirm proper operation.

---

**Limited warranty and Disclaimer/Compliance Requirements**

The product used is subject to the following “Limited warranty and Disclaimer” and “Compliance Requirements”. Read and accept them before using the product.

**Limited warranty and Disclaimer**

1. **The warranty period of the product is 1 year in service or 1.5 years after the product is delivered.\(^2\)**

   Also, the product may have specified durability, running distance or replacement parts. Please consult your nearest sales branch.

2. **For any failure or damage reported within the warranty period which is clearly our responsibility, a replacement product or necessary parts will be provided.**

   This limited warranty applies only to our product independently, and not to any other damage incurred due to the failure of the product.

3. **Prior to using SMC products, please read and understand the warranty terms and disclaimers noted in the specified catalog for the particular products.**

\(^1\) ISO 4414: Pneumatic fluid power – General rules relating to systems.

\(^1\) ISO 4413: Hydraulic fluid power – General rules relating to systems.

\(^1\) IEC 60204-1: Safety of machinery – Electrical equipment of machines. (Part 1: General requirements)

\(^1\) ISO 10218-1: Manipulating industrial robots - Safety.

\(^1\) ANSI / NFPA T2.25.1 R2: Pneumatic fluid power - Systems standard for industrial machinery.

\(^1\) NFPA (Fluid) T2.24.1 R1: Hydraulic fluid power - Systems standard for stationary industrial machinery.

\(^1\) NFPA 79: Electrical Standard for Industrial Machinery.

\(^2\) Vacuum pads are excluded from this 1 year warranty.

A vacuum pad is a consumable part, so it is warranted for a year after it is delivered. Also, even within the warranty period, the wear of a product due to the use of the vacuum pad or failure due to the deterioration of rubber material are not covered by the limited warranty.

**Compliance Requirements**

1. **The use of SMC products with production equipment for the manufacture of weapons of mass destruction (WMD) or any other weapon is strictly prohibited.**

2. **The exports of SMC products or technology from one country to another are governed by the relevant security laws and regulations of the countries involved in the transaction. Prior to the shipment of a SMC product to another country, assure that all local rules governing that export are known and followed.**

---

**Safety Instructions**

Be sure to read “Handling Precautions for SMC Products” (M-E03-3) before using.
